Great Lakes Coastal Flood Study
Lake Michigan
Mackinac County, Michigan
Individual Discovery Report
Report Number 01
February 2013

U.S. Department of Homeland Security
Federal Emergency Management Agency Region V
536 South Clark Street, 6th Floor
Chicago, Illinois 60605
**Project Area Community List**

This list includes all communities within the Project Area covered by this report for the Great Lakes Coastal Study under consideration for new Federal Emergency Management Agency (FEMA) Risk Mapping, Assessment, and Planning (Risk MAP) products and datasets, which may include Flood Insurance Studies (FISs) and Flood Insurance Rate Maps (FIRMs). Not all communities will receive new/updated FEMA Risk MAP products and datasets or FISs and FIRMs.

I. Discovery Overview

The Federal Emergency Management Agency (FEMA) Risk Mapping, Assessment, and Planning, or Risk MAP, program helps communities identify, assess, and reduce their flood risk. Through Risk MAP, FEMA provides information to enhance local mitigation plans, improve community outreach, and increase local resilience to floods.

During the Discovery phase of Risk MAP project development, FEMA:

- Gathers information about local flood risk and flood hazards
- Reviews mitigation plans to understand local mitigation capabilities, hazard risk assessments, and current or future mitigation activities
- Supports communities within the coastal area to develop a vision for the future
- Collects information from communities about their flooding history, development plans, daily operations, and stormwater and floodplain management activities
- Uses all information gathered to determine which areas require mapping, risk assessment, or mitigation planning assistance through a Risk MAP project
- Develops Discovery Map and Report that summarize and display the Discovery findings

The Discovery process involves coordination with Great Lakes stakeholders, data collection and analysis, community interviews, a Discovery Meeting with stakeholders affected by the study, and development of recommendations based on an analysis of data and information gathered throughout the process.

i. Great Lakes Coastal Flood Study

FEMA has initiated a coastal analysis and mapping study that may result in updated Flood Insurance Rate Maps (FIRMs) for coastal counties along the Great Lakes. The new coastal flood hazard analyses will utilize updated 1-percent-annual-chance (100-year) flood elevations obtained from a comprehensive storm surge study being developed by the U.S. Army Corps of Engineers (USACE).
The Great Lakes Coastal Flood Study (GLCFS) will incorporate modern analysis of historic storm and high water events and provide for updated flood risk information serving United States communities having shoreline along the Great Lakes. The storm surge study is one of the most extensive coastal storm surge analyses to date, encompassing coastal floodplains in the eight States with coastlines on the Great Lakes.

An updated coastal flood study is needed to obtain a better estimate of coastal flood hazards on the Great Lakes. The current, effective FIRMs are outdated primarily due to the age of data and the coastal methodologies used in producing them. Major changes in National Flood Insurance Program (NFIP) policies and methodologies have been implemented since the effective date of many flood insurance studies in the area, creating the need for an update that will reflect a more detailed and complete hazard determination.

The GLCFS includes a system-wide solution that provides a comprehensive analysis of storm and high water events within the Great Lakes Basin. This program is funded through the FEMA Risk MAP program. FEMA, USACE, Association of State Floodplain Managers (ASFPM), State partners, and FEMA contractors will collaborate in updating the coastal methodology and flood maps, and create new flood risk products. FEMA manages the NFIP, which is the cornerstone of the national strategy for preparing communities for flood-related disasters.

ii. **Purpose of Great Lakes Discovery**

The Great Lakes Discovery process included data collection, information exchange between all governmental levels of stakeholders, spatial data presentation, cooperative discussion with stakeholders to better understand the Great Lakes area, and a collaborative approach on the project planning. The process allowed FEMA to continue to vet the Great Lakes coastal study methodologies with a large stakeholder group, to discuss local priorities and data, to discuss mitigation strategies and coastal issues, and to move towards a project that will successfully identify the risks associated with Great Lakes flooding.

This Discovery Report discusses the communities potentially affected by coastal flooding in Mackinac County, Michigan. This Discovery process helped FEMA to better identify the types of datasets or products that will be useful at the local level, especially as it relates to identifying new mitigation strategies and actions, and for use in local planning efforts. Products that may be available to communities as a result of the Great Lakes flood study include updated FIRMs and FISs, coastal flood risk products, calibrated models for storm...
surge and wave analysis on each of the lakes, and accurate depictions of water level and wave response on each lake occurring during hundreds of actual events. The type of product a community receives is dependent not only on the coastal flood study analysis results and funding, but also on the type of datasets, local and national, that are available.

The following section describes the coastal flood risk products that a community may receive, as well as some products that are under development for the Great Lakes study areas.

### iii. Coastal Flood Risk Products

As part of a Risk MAP project, FEMA will seek to provide State and community officials with three flood risk products to help them gain a better understanding of flood risk and its potential impact on communities and individuals. These products will also enable communities to move forward with informed mitigation actions to reduce identified risk. Delivery of the products discussed below will depend on available data, results of coastal analysis, local partnerships, and fiscal year funding.

The three products are:
- Flood Risk Database
- Flood Risk Report
- Flood Risk Map

These products will summarize information captured in flood risk datasets that may be generated during a Risk MAP, or flood risk, study. The flood risk datasets could include regular and enhanced products. Standard flood risk datasets, also termed products, are described below.

- **Changes Since Last FIRM (CSLF)**
  The CSLFs serve the following purposes:
  - **Identify Areas and Types of Flood Zone Change:**
    - Compares current effective (previous) with proposed (new) flood hazard mapping; and
    - Flood zone changes are categorized and quantified.
  - **Provide Study/Reach Level Rationale for Changes Including:**
    - Methodology and assumptions; and
o Changes of model inputs or parameters (also known as Contributing Engineering Factors).

- **Flood Depth and Analysis Grids (1-percent-annual-chance event only)**
  Reflect total depth (i.e. stillwater and waves). Will be created for the 1-percent frequency event of the engineering studies performed and as appropriate for the data. Wave runup areas may not be applicable. Created using the regulatory mapping and associated zone breaks as input.

- **Flood Risk Assessment (Hazus-MH)**
  Hazus-MH combines science, engineering and mathematical modeling with GIS technology to estimate losses of life and property, and shows those losses on a map. Hazus-MH estimates impacts to the physical, social, and economic vitality of a community from earthquakes, hurricane, winds, and floods. Coastal flood risk assessments will be similar to riverine, but will use coastal depth grids as input for refined analysis. Hazus-MH analysis and data can support adoption of high regulatory standards for structures in high loss areas. Hazus-MH results can help to provide justification to find mitigation projects to protect citizens and properties from losses during future coastal flood events.

In addition, FEMA is looking into the possibility of developing some unique Great Lakes coastal flood risk products that utilize datasets that have recently been collected or will be collected as part of the GLCFS:
- Storm Response Erosion Data: Dataset is expected to contain the results from erosion analysis in response to the 1-percent-annual chance flood event
- Shoreline Feature Data: Dataset was developed by the USACE in 2012 and contains primary and secondary land use tables, as well as coastline type, materials, and vegetation. The current dataset contains data at one-mile spacing. The dataset does not include field-based reconnaissance or sediment/subsurface soil collection.

The delivery of these standard flood risk products and the Great Lakes coastal flood risk datasets will be dependent on the location of the Risk MAP study and coastal analysis, data
availability, fiscal year funding, and partnerships with local communities. Therefore, all communities may not receive flood risk products.

II. **Stakeholder Communication and Coordination**

Communication and coordination with Federal, State and local stakeholders is key to the success of the GLCFS. A large emphasis has been placed on identifying stakeholders early and often and working with those stakeholders continually throughout the study process, from Discovery all the way through flood map and flood risk product development. Through outreach, the goal is to increase understanding of the new coastal study methodologies and the tools and processes that will be available for risk-based community planning, and to increase flood hazard awareness within the Great Lakes coastal region.

i. **Lake Michigan Discovery Stakeholder Coordination**

Meetings, emails, telephone calls, and letters are essential to communicate effectively throughout the life of this Lake Michigan Coastal Flood Study project, which has begun with this Discovery process.

To kick-off this Discovery process, FEMA formed a group of core stakeholders, which included representatives from FEMA Region V, STARR (mapping partner to FEMA), USACE, NOAA, ASFPM, the State NFIP Coordinators, the State Hazard Mitigation Officers (SHMOs), and State Engineers. The core stakeholders reviewed the Discovery plan, objectives, and key outcomes for Lake Michigan Discovery with FEMA, provided suggestions for outreach and communication, and raised any concerns as it related to Lake Michigan and the coastal flood study process. Following this kick-off process, outreach, communication, and coordination with local stakeholders was initiated.

Discovery Meeting letter invitations were sent to local community and county stakeholders within the Mackinac County portions of the Lake Michigan Coastal Flood Study project. In addition, an email invitation was sent to a larger list of stakeholders including, but not limited to, the core stakeholders, other federal agencies, universities, watershed groups, Great Lakes associations, technical stakeholders, and emergency management agencies. Representatives from the local governments, including cities, townships, and villages, were considered fundamental stakeholders in this process because they have been elected or appointed to represent the interests of the residents of this project area.

The Discovery Meeting invitations also included a Coastal Data Request Form (Attachment A). Communities were asked to provide information on data that they had available at the local level that may be of use during the flood study update and during the development of the coastal flood risk products discussed earlier in this report. The Coastal Data Request Form included data requests for:

- Base Map Data
- Coastal Data
Historic Flood Data
Risk Assessment
Flood Mitigation Information
Community Plans and Projects
Other comments/concerns based on local knowledge

Hudson Township returned information through the Coastal Data Request Form. A summary of the responses provided in the Coastal Data Request Form can be found in Section IV, Summary of Data Analysis, of this report.

In addition to the hard copy letter invitations, and in order to improve the communication and data sharing leading up to the Discovery Meeting, FEMA offered local communities an opportunity to attend pre-Discovery Meeting conference call, referred to as an “Information Exchange Session”. The conference call information was included in the Discovery Invitation letters mailed to local community officials, and an email reminder was sent out as well. The session’s intent was to begin the process of learning about local data availability and what the critical issues are for the Great Lakes communities. It should be noted that no local officials were able to attend the offered information exchange session conference call for Mackinac County, so data collection efforts prior to the Discovery Meeting were based on information received through emails, phone calls, the Coastal Data Request Form, and data research.

The core stakeholder documents, “Information Exchange Session” documents, and Discovery Meeting invitations can be found in Attachment B, Mackinac County Pre-Meeting Correspondence.

III. **Discovery Meeting**

The Discovery Meeting for Mackinac County was held on August 13, 2012 in St. Ignace, Michigan. Communities and stakeholders affected by coastal flooding in Mackinac County were invited to the Discovery Meeting. The purpose of this meeting was to facilitate discussion about study needs, mitigation project needs, desired compliance support, and local flood risk awareness efforts.

The objectives of the Discovery Meeting included:

- Continuation and expansion upon stakeholder engagement
- Discussion of data inputs from Federal, state and local stakeholders
- Identification of local coastal flood hazard needs and areas of concern
- Identification of flood risk products and datasets that best advance coastal mitigation action
• NFIP regulatory updates
• Discovery schedule and deliverables

The Discovery Meeting presentation included the following information:
• An overview of the GLCFS and schedule
• Review of the Discovery process and outcomes
• Discussion of coastal mapping and flood risk topics to be aware of
• Discussion of how the study may affect the communities, including compliance requirements
• Review of hazard mitigation opportunities and grant funding
• Encouragement and facilitated discussion regarding coastal study needs, mitigation project needs, desired compliance support, and local flood risk awareness efforts

Draft Discovery Maps for Mackinac County (Attachment C) were displayed and utilized during the meeting to encourage the discussion regarding areas of coastal flood risk concern and areas of hazard mitigation interest. The draft Discovery Maps shown at the meeting included geospatial and tabular data that had been collected prior to the meeting.

Geospatial Data:
• Average Annualized Loss (AAL) data
• Coastal Barrier Resources System (CBRS)¹
• Coordinated Needs Management Strategy (CNMS)² Data- riverine only
• Proposed Transects
• Effective Special Flood Hazard Areas (SFHAs)
• Jurisdictional Boundaries
• Letters of Map Change (LOMCs)
• Levees
• Shoreline
• Streams
• USGS Gages
• Watershed Boundaries

Tabular Data:
• Declared Disasters
• Flood Insurance Data
• Potential Mitigation Actions (from local Hazard Mitigation Plans)
• Summary of Shoreline Data (Type and Coverage)

¹ CBRS consists of the undeveloped coastal barriers and other areas located on the coasts of the United States that are identified and generally depicted on a series of maps. CBRS areas are ineligible for most new Federal expenditures and financial assistance.
² CNMS is FEMA’s strategy for coordinating the management of mapping needs using modern geospatial technologies and current policies, requirements, and procedures. CNMS makes information related to mapping needs readily accessible and more usable. CNMS is only for riverine studies at this time. It is expected coastal needs will be captured in this system in the future.
Participants at the Discovery Meeting were asked to cooperatively identify Areas of Concern and Areas of Mitigation Interest (AoMIs) within the Mackinac County Lake Michigan study area using the draft Discovery Maps and through general discussion during the meeting.

In addition to the draft Discovery Maps, figures showing the location of initially proposed draft transects around Mackinac County were available for review and comment. Stakeholders were encouraged to review the proposed draft transects and provide comments related to the location of the transects. The proposed draft transect maps that were available at the Discovery Meeting for Mackinac County can be found in Attachment D. A sample map is shown below as Figure 1:
All comments related to coastal flood risk and draft transects that were provided during the Mackinac County Discovery Meeting on the draft Discovery Maps and draft transect figures, as well as comments provided following the meeting, have been compiled into geospatial layers and associated tables. The GIS layers, titled “Stakeholder General Comments” and “Stakeholder Transect Comments”, are shown on the Final Discovery Map in Appendix R of the basin-wide Lake Michigan Discovery Report (Federal Emergency Management Agency, 2013). A description of each comment collected for Mackinac County can be found in Attachment E, Stakeholder Comments from Discovery Meeting, of this report. Each comment has a unique map identification number (if one exists) that correlates to its location on the Final Discovery Map. The identification of a comment (ID) categorized as a “Stakeholder General Comment” is represented by using the first three letters of the county name followed by a unique number (i.e. MAC – 1, MAC - 2). The identification of a comment (ID) categorized as a “Stakeholder Transect Comment” is represented by using the first three letters of the county name, followed by “TR”, followed by a unique number (i.e. MAC-TR-1, MAC-TR-2).

A summary of the transect comments collected and the resulting revisions to the draft transect layout can be found in this report in Section IV, Summary of Data Analysis, under the “Proposed Draft Transects” subsection.

Discovery Meeting minutes, sign in sheets, PowerPoint presentation, marked up draft Discovery Maps, and correspondence documentation have been included in Attachment F, Mackinac County Discovery Meeting Documents.

IV. Summary of Data Analysis

During this Discovery portion of the Lake Michigan Coastal Flood Study project, a massive collection of tabular and spatial data was conducted for all the coastal communities from Federal and State sources, as well as information collected through phone conversation, information exchange session conference call, the Discovery Meeting, and the Discovery Coastal Data Request Forms sent to each coastal community. This section lists the types of data and their sources that were collected for the Mackinac County study area, including information collected during and after the Discovery Meeting. The data analysis that follows Table 1 is divided into two sections: one section listing the data that can be used for Risk MAP product development and the other section listing the information that helped the study team to form a better understanding of the Mackinac County Lake Michigan Project Area prior to moving forward with the coastal flood study.

i. **Data that can be used for future Coastal Flood Risk Products**

During the Discovery process, the project team created a database of available flood hazard and flood risk assessment data. This database not only provides an inventory of available data, but helps identify gaps in the flood hazard data. State, county, and government geographic information system (GIS) websites can provide some of the pertinent data, but local knowledge of flooding and mitigation projects is critical to help accurately determine flood risks and mapping needs. Therefore, local and regional data were also used where available. The subsections below provide details on the data determined to be available within the project area.

I.IV.i.1 **Average Annualized Loss (AAL) Data**

Average Annualized Loss (AAL) data provides a general understanding of the dollar losses associated with a certain frequency of flood events within a county and is used to get a relative comparison of flood risk. They are determined by FEMA’s Multi-Hazard Risk Assessment and Loss Estimation Program, otherwise known as Hazus-MH.

Hazus, a free risk assessment software application from FEMA, is the most widely used flood risk assessment tool available. Hazus can run different scenario floods (riverine and coastal) to determine how much damage might occur as a result. Hazus can also be used by community officials to evaluate flood damage that can occur based on new or proposed mitigation projects or future development patterns and practices, and it can run specialized risk assessments, such as what happens when a dam or levee fails.

Hazus-MH includes national datasets that can be supplemented with local data. If local detailed data are available, users may consider using this data to perform more refined Hazus analyses. Hazus-MH is flexible and allows users to update Hazus-MH with local data or use a combination of both local and national. Augmenting the Hazus-MH provided data with local data can improve the accuracy and resolution of analysis results. Additional information about the Hazus-MH process and tool can be found at [http://www.fema.gov/protecting-our-communities/hazus](http://www.fema.gov/protecting-our-communities/hazus).

The Hazus-MH analysis used in this report is based on approximate flood boundaries and national datasets. The calculation is based on flood elevation estimates using the 10-meter Digital Elevation Model (DEM) on streams with drainage areas of at least 10 square miles.

The results shown in Table 2 include data for the entire county, as opposed to only the coastal project area. Information can also be obtained from the report titled FEMA *Hazus AAL Usability Analysis*, dated April 13, 2011 (Federal Emergency Management Agency, 2011). AAL data summarized at the census block level are shown on the draft Discovery Maps (Attachment C).

1.IV.i.2 Coastal Recession
Coastal erosion is the recession of land and the removal of beach or dune sediments. It affects all of the beaches and coasts in the world, including those of Lake Michigan. Important factors in coastal erosion are the types of rock or soil being eroded, the presence or absence of beaches or human-made structures, and how the shore is oriented with respect to prevailing winds and waves, water levels, climatology, and groundwater and surface drainage.

In Michigan, areas prone to erosion along the Lake Michigan shoreline are subject to special setback requirements established by the Michigan Department of Environmental Quality (MDEQ). From MDEQ’s website, high risk erosion areas are those shorelands of the Great Lakes and connecting waters where recession of the zone of active erosion has been occurring at a long-term average rate of one foot or more per year. The erosion can be caused from one or several factors, including high water levels, storms, wind, ground water seepage, surface water runoff, and frost. The high risk erosion area regulations require setback distances to protect new structures from erosion for a period of 30 to 60 years, depending on the size, number of living units and type of construction. Approximately 300 miles of shoreline are classified as high risk erosion area. Updates of the recession rate studies, which form the basis of the setbacks, are periodically conducted to reflect changing water levels and shore protection efforts.

Table 3 lists the communities within Mackinac County that have mapped High Risk Erosion Areas.

Additional information, including High Risk Erosion Area maps, can be found at the Department of Environmental Quality’s High Risk Erosion Areas website at [http://www.michigan.gov/deq/0,1607,7-135-3313_3677_3700-10860--00.html](http://www.michigan.gov/deq/0,1607,7-135-3313_3677_3700-10860--00.html). The complete set of High Risk Erosion Areas can also be found in Appendix U of the Lake Michigan basin-wide Discovery Report (Federal Emergency Management Agency, 2013).
If users of this Discovery Report have any additional erosion or recession data or photographs that you would like to submit, please contact FEMA Region V Mitigation Division.

I.IV.i.3 Federal Land
Federal lands data were obtained from the National Atlas at http://nationalatlas.gov/mlg/fedlanp.html. This data is also available from the National Discovery Data Repository located on FEMA’s Mapping Information Platform (MIP) at https://hazards.fema.gov. The map layer shows those lands owned or administered by the Federal Government, including the Bureau of Land Management, the Bureau of Reclamation, the U.S. Department of Agriculture Forest Service, the Department of Defense, the U.S. Fish and Wildlife Service, the National Park Service, and other agencies. Only areas of 640 acres or more are included.

Mackinac Wilderness is part of the Hiawatha National Forest and is a Federal Land that exists along the Lake Michigan shoreline of Mackinac County. It is administered by the Forest Service.

I.IV.i.4 Jurisdictional Boundaries
Jurisdictional boundaries were obtained for Mackinac County and Incorporated Areas from a derived set of TIGER line files available through the U.S. Census Bureau geography division. TIGER line files were last derived from the TIGER database in 1997. To find out more about TIGER line files and other Census TIGER database derived data sets visit http://www.census.gov/geo/www/tiger.

Jurisdictional boundaries may also be extracted from the “Michigan Geographic Framework” dataset available through Michigan CGI (Center for Geographic Information) at http://www.mcgi.state.mi.us/mgdl/.

I.IV.i.5 Local Data
As part of this Discovery process, communities were asked to fill out a Coastal Data Request Form and provide information on data that they had available at the local level that may be of use during the coastal flood study update, and during the development of the coastal flood risk products discussed earlier in this report. The Coastal Data Request Form (Attachment A) included data requests for base map data, coastal data, historic flood data, risk assessment information, mitigation information, and community plans and projects.

The table in Attachment G compiles all the information collected for Mackinac County from the completed Coastal Data Request Forms, during the Discovery Meeting, or through phone conversations and email. Hudson Township provided information via the Coastal Data Request Form through email.
In summary, Hudson Township noted they did not have digital data or information related to coastal flooding at the local level, but noted they were interested in learning more about existing flood risk in the community. No local information or data for other coastal communities was provided for Mackinac County during this Discovery process.

I.IV.i.6 Publicly Owned Land
The Michigan CGI Geographic Data Library Catalog at http://www.mcgi.state.mi.us/mgdl/ currently contains over 60 unique statewide datasets including the state’s base map, aerial imagery, geology, hydrography, land ownership, topography, and much more. Publicly owned lands (national, state, and local parks, forests, etc.) were found in “DNR Land and Mineral Ownership” dataset available through Michigan CGI.

I.IV.i.7 Shoreline Information
A shoreline feature dataset was generated by USACE Detroit District (U.S. Army Corps of Engineers, 2012) using 2012 oblique photographs (see “Topography, Bathymetry, and Oblique Imagery” subsection in this report). The dataset captures shoreline types, land uses, coverage, and vegetation types along the entire Great Lakes shoreline, including Lake Michigan. The dataset includes identification of “artificial” shoreline, which may be indicative of local coastal flood protection structures. This dataset does not identify the level of protection of any coastal structures, and it does not validate whether or not a coastal structure exists. The current dataset contains data at one-mile spacing. The dataset does not include field-based reconnaissance or sediment/subsurface soil collection. The dataset can be downloaded from http://www.greatlakescoast.org/ under the “Technical Resources” section.

From the USACE shoreline feature dataset, the approximate shoreline along Mackinac County that is covered by this study is 91.7 miles. The shoreline classification information for Mackinac County is summarized in Tables 4 through 7, including shoreline types, land uses, coverage, and vegetation types, respectively.

I.IV.i.8 Stream Lines/Hydrograph
Stream lines were obtained from USGS’s National Hydrography Dataset (NHD). The NHD is a digital vector dataset used by Geographic Information Systems (GIS). It contains features such as lakes, ponds, streams, rivers, canals, dams and stream gages. The datasets are designed to be used in general mapping and in the analysis of surface-water systems. Data can be downloaded from [http://nhd.usgs.gov/data.html](http://nhd.usgs.gov/data.html).

I.IV.i.9 Topography, Bathymetry, and Oblique Imagery

New Data Collected for Great Lakes Coastal Flood Study
As part of the GLCFS, Light Detection and Ranging (LiDAR) was collected to develop topographic and bathymetric data along the Lake Michigan shoreline. Topography is the configuration of natural and man-made features of a surface area and their relative position and elevations. Bathymetry is the underwater equivalent to topography.

LiDAR is an optical remote sensing technology that can measure the distance to, or other properties of, a target by illuminating the target with light, often using pulses from a laser. A narrow laser beam can be used to map physical features with very high resolution. Downward-looking LiDAR instruments fitted to aircraft and satellites are used for surveying and mapping. LiDAR can be used to create DTM (Digital Terrain Models) and DEM (Digital Elevation Models), which is a digital model or 3-dimensional representation of the terrain's surface.

The LiDAR data for this study was collected within a 1500 meter buffer (500 meters inland and 1000 meters seaward of the land/water interface). Where water clarity permitted, data was collected to cover all federal navigation projects. Flight lines were
flown along the channel alignment to ensure the best possible coverage of inlets and structures.

For quality control purposes, one cross line was used every 25 miles along shore or more frequently to ensure 90 percent of all planned lines within the area were crossed by a cross line. In areas of the coast where natural or artificial barriers prevent aircraft operations, the cross line(s) were collected at the nearest possible location to the required interval, but no closer than five (5) miles to an adjacent planned cross line. Overlapping lines and datasets were compared to each other and to cross lines and the differences calculated.

At the time this report was generated, the quality control process was not yet completed on the LiDAR dataset. However, as part of that process, the vertical difference between the LiDAR and ground truth data will be calculated. Ground truth refers to a process in which a pixel on a satellite image is compared to what is there in reality. This is especially important in order to relate LiDAR data to real features and materials on the ground. The collection of ground truth data enables calibration of the LiDAR data, and aids in the interpretation and analysis of what is being sensed. Using this process, all systematic errors will be identified and eliminated and remaining errors should have a normal distribution. Differences between a DEM created from the LiDAR data representing bare ground and the ground truth data will be unbiased and within +/-15 cm (RMSE$^3$) in flat terrain and within +/-30 cm (RMSE$^3$) in hilly terrain. Horizontal positions will be accurate to +/- 1.5m (RMSE$^3$). Data will be processed to 2ft contours.

The processing of the bathymetric data for this study will be performed based on the strongest return of each LiDAR pulse, assuming this depth represents the bottom. Data will be processed to produce bottom reflectance data from the LiDAR data.

As of the date of this report, the LiDAR data is expected to become available in the spring of 2013 for this study area. There is a delay in the schedule to collect new bathymetric data; therefore, existing bathymetric data may be used for the transect-based coastal flood hazard analysis. Existing high-resolution bathymetric and topographic data is currently available at [http://csc.noaa.gov](http://csc.noaa.gov).

As part of the GLCFS, USACE collected oblique imagery for the entire Great Lakes coastline in 2012. Oblique imagery is captured at an angle, as compared to an overhead view provided by orthophotos, and allows users a 3-dimensional view of landscape, buildings, and other features. This dataset may be useful to communities during emergency response, planning, and identification of shoreline types and obstructions; and management of assets, critical facilities, and public properties along the Lake Michigan shoreline. The oblique imagery is current available via a web-based browser at [http://greatlakes.usace.army.mil/](http://greatlakes.usace.army.mil/).

---

$^3$ Root-mean-square-error is a measure of the differences between values predicted by a model or an estimator and the values actually observed.
**Other Data Available:**
The NOAA Coastal Services Center, Digital Coast, hosts a variety of digital coastal data, including bathymetric and topographic data, and is located at http://www.csc.noaa.gov/digitalcoast.

**I.IV.i.10 Transportation**
The Bing Map service has been used as a basemap layer on the Discovery Map, and includes a transportation layer. For more information on Bing Map services and how they can be used in GIS, please visit http://www.arcgis.com/home and search for “Bing Maps”.

Transportation data can also be found in the “Michigan Geographic Framework” dataset available through Michigan CGI (Center for Geographic Information) at http://www.mcgi.state.mi.us/mgdl/.

**I.IV.i.11 Watershed Boundaries**
U.S. Geological Survey (USGS) Hydrologic Unit Code 8 (HUC8) watershed boundaries were obtained from the National Atlas 2011 “Raw Data Download” (http://nationalatlas.gov/atlasftp.html). Mackinac County contains portions of five HUC8 watersheds: Tahquamenon (04020202), Manistique (04060106), Brevoort-Millecoquins (04060107), St. Marys (04070001), and Carp-Pine (04070002).

**ii. Other Data and Information**
Mackinac County is located in the Eastern Upper Peninsula of the state of Michigan. According to the U.S. Census Bureau, the 2010 population estimate for Mackinac County is 11,113 and there is a total area of approximately 2,100 square miles, 1,079 of which is water. It is bordered by both Lake Michigan and Lake Huron, as well the counties of Chippewa, Schoolcraft, and Luce. Much of the county is rural and characterized by low population density. The county’s geographic location is fairly remote from large urban areas of Michigan (U.S. Census Bureau, 2010).

Mackinac County gets an average of 29 inches of rain per year and snowfall totals 77 inches. The number of days with any measurable precipitation is 124. On average, there are 156 sunny days per year in Mackinac County. The July high is around 77 degrees Fahrenheit and the January low is 10 (U.S. Census Bureau, 2010).

Additional information about Mackinac County can be found on their county website at www.mackinaccounty.net.

**I.IV.ii.1 Coastal Barrier Resources Systems**
Coastal barriers are unique land forms that protect distinct aquatic habitats and serve as the mainland’s first line of defense against damage from coastal storms and erosion. The Coastal Barrier Resources System (CBRS) defines a coastal barrier as a landform composed of unconsolidated shifting sand or other sedimentary material that is generally long and narrow and entirely or almost entirely surrounded by water. They are sufficiently
above normal tides so that they usually have dunes and terrestrial vegetation. The CBRS boundaries were downloaded from U.S. Fish and Wildlife Service http://www.fws.gov/CBRA/Maps/Data_Disclaimer_Shapefiles.html and are dated June 15, 2010.

Mackinac County has ten designated units of the coastal barriers along the Lake Michigan shoreline within this study area (fourteen in total for the entire county).

I.IV.ii.2 Coastal Flood Protection Measures
Coastal structures along Lake Michigan will be reviewed in more detail during the engineering analysis portion of the Lake Michigan study and were not analyzed as part of this Discovery process. A summary of information collected regarding existing coastal structures and flood protection measures is described below.

FEMA’s Midterm Levee Inventory (MLI) project compiled a database of structures that were designed to provide at least the minimum level of protection from the base flood level (1-percent-annual-chance flood). For this Discovery process, the November 2011 MLI Status Report published by FEMA was reviewed. The MLI Levee database showed no levee segments in Mackinac County that provide protection from the 1-percent-annual-chance flood.

The USACE Coastal & Hydraulics Laboratory (CHL), a member of the Engineer Research & Development Center (ERDC), has compiled an inventory of coastal structures called the Enterprise Coastal Inventory Database (ECID). The ECID application and database houses information on more than 900 coastal structures in the U.S. and uses a Google Earth interface for users to access information on the structures including project reports, aerial photographs, wave and water level and bathymetric data. The database and application are available at http://chl.erdc.usace.army.mil/chl.aspx?p=s&a=Projects;246. These maintained coastal structures protect harbors and shore-based infrastructure, provide beach and shoreline stability control, provide flood protection to varying degrees, and protect coastal communities, roadways and bridges, etc. These structures include seawalls, bulkheads, revetments, dikes and levees, breakwaters, groins, sills/perched beaches, and jetties and piers.

While several of these structures exist along the Lake Michigan shoreline, none were identified in Mackinac County.

I.IV.ii.3 Community Assisted Visits
Statewide Community Assistance Visits (CAVs) are part of the evaluation and review process used by FEMA and local officials to ensure that each community adequately enforces local floodplain management regulations to remain in compliance with NFIP requirements. Generally, a CAV consists of a tour of the floodplain, an inspection of community permit files, and meetings with local appointed and elected officials. During a CAV, observations and investigations focus on identifying issues in various areas, such as the community’s floodplain management regulations (ordinance), community
administration and enforcement procedures, engineering or other issues within the FIRMs, other problems in the community’s floodplain management, and problems with the biennial report data. Any administrative problems or potential violations identified during a CAV are documented in the CAV findings report. The community is notified and given the opportunity to correct those administrative procedures and remedy the violations to the maximum extent possible within established deadlines. The summary of CAV visits were extracted from FEMA’s Community Information System (CIS) at [https://portal.fema.gov](https://portal.fema.gov) in July 2012. The State has conducted a total of seven CAVs in the Townships of Clark, Garfield, Hendricks, Hudson, Moran, Newton, and St. Ignace, as well as in the City of St. Ignace. No CAV records were found for the Townships of Bois Blanc and Marquette, or the City of Mackinac Island. Table 8 shows the summary of CAV dates by community:

CAV = Community Assisted Visit

**I.IV.ii.4 Community Rating System**

The Community Rating System (CRS) is a voluntary incentive program to provide flood insurance premium discounts to NFIP-participating communities that take extra measures to manage floodplains above the minimum requirements. A point system is used to determine a CRS rating. The more measures a community takes to minimize or eliminate exposure to floods, the more CRS points are awarded and the higher the discount on flood insurance premiums. The list of CRS communities is available on FEMA’s Website site at [http://www.fema.gov/library/viewRecord.do?id=3629](http://www.fema.gov/library/viewRecord.do?id=3629), which was accessed in July 2012.

No coastal communities in Mackinac County coastal study area participate in the CRS program.

**I.IV.ii.5 Comprehensive Plans**

A comprehensive plan is a land use document providing framework and policy direction for land use decisions. Comprehensive plans usually include chapters detailing policy
direction affecting land use, transportation, housing capital facilities, utilities, coastal and rural areas. Comprehensive plans identify where and how growth needs will be met.

In Mackinac County, a County Master Plan exists to address land use and development. From the Master Plan, the plan’s purpose is “the coordinated, adjusted and harmonious development of the County”. Land use issues may be addressed by the plan, and planners may project 20 years or more into the future. The Master Plan for Mackinac County was adopted April 25, 2007 and a copy can be found at their website at http://www.mackinaccounty.net/county-info-a-links/master-plan.html.

No comprehensive plans for the coastal communities within Mackinac County were collected as part of this Discovery process, though plans may exist.

I.IV.ii.6 Coordinated Needs Management Strategy (CNMS) and NFIP Mapping Needs

During FEMA’s Flood Map Modernization program from 2003 to 2008, FEMA adhered to Procedure Memorandum No. 56 which states that, “Section 575 of the National Flood Insurance Program Reform Act of 1994 mandates that at least once every five years FEMA assess the need to review and update all floodplain areas and flood risk zones identified, delineated, or established under Section 1360 of the National Flood Insurance Act, as amended.” This requirement was fulfilled through the Mapping Needs Assessment process. Other mechanisms such as the Mapping Needs Update Support System (MNUSS) and scoping reports were used to capture information describing conditions on the FIRMs and the potential for a map update.

FEMA’s Coordinated Needs Management Strategy (CNMS) was initiated through FEMA’s Risk MAP program in 2009 to update the way FEMA organizes, stores, and analyzes flood hazard mapping needs information for communities. CNMS defines an approach and structure for the identification and management of flood hazard mapping needs that provides support to data-driven planning and the flood map update investment process in a geospatial environment. The goal is to identify areas where existing flood maps are not up to FEMA’s mapping standards. More information about the CNMS can be found at http://www.fema.gov/library/viewRecord.do?id=4628.

There are three classifications within the CNMS: “Valid,” “Unverified,” and “Unknown.” New and updated studies (those with new hydrologic and hydraulic models) performed during FEMA’s Map Modernization program were automatically determined to be “Valid” and the remaining studies went through a 17-element validation process with 7 critical and 10 secondary elements. Validation elements apply physical, climatological, and environmental factors to stream studies to determine validity. A stream study has to pass all of the critical elements and at least seven secondary elements to be classified as “Valid.” The remaining streams are classified as “Unverified” or “Unknown”. Studies for which flood hazard data are identified as having critical or significant secondary change characteristics are classified as “Unverified.” Streams with a status of “Unknown” are those that have a study underway, will be evaluated in the future, or do not have sufficient
information to determine whether they are “Valid” or “Unverified” (Federal Emergency Management Agency, 2010).

Table 9 summarizes the draft results of the county-wide validation analysis obtained from CNMS in June 2012. CNMS only captures riverine studies at this time.

**I.IV.ii.7 Critical Facilities**

Critical facilities are the facilities that can impact the delivery of vital services, cause greater damages to other sectors of a community, or put special populations at risk. Hospitals, roads, schools, and shelters are all examples of critical facilities that play a central role in disaster response and recovery. Understanding which facilities are exposed, and the degree of that exposure, can help reduce or eliminate service interruptions and costly redevelopment. Incorporating this information into development planning helps communities get back on their feet faster.

The assessment of the flood risk posed to critical facilities is an important aspect of a hazard mitigation plan. The 2006 Mackinac County Hazard Mitigation Plan (expired May 16, 2011) noted that while critical facilities do exist in the county, the details on the each site are not publically available and interested parties should contact the Mackinac County Office of Emergency Services to receive additional detail on each critical facility site. The critical facility locations can be found in maps with the 2006 Mackinac County Hazard Mitigation Plan, which can be downloaded at [http://www.eup-planning.org/index.php?page=Natural_Hazards_Mitigation_Planning#HM12](http://www.eup-planning.org/index.php?page=Natural_Hazards_Mitigation_Planning#HM12).

**I.IV.ii.8 Critically Eroded Beaches and Beach Nourishment/Dune Replacement Projects**

Critically eroded beaches and beach nourishment/dune replacement projects were not identified in Mackinac County during this Discovery process.
I.IV.ii.9  Dams

The National Inventory of Dams (NID) is a congressionally authorized database that documents dams in the United States and its territories. The current NID, published in 2010, includes information on 84,000 dams that are more than 25 feet high, hold more than 50 acre-feet of water, or are considered a significant hazard if they fail. The NID is maintained and published by the USACE, in cooperation with the Association of State Dam Safety Officials, the States and territories, and Federal dam-regulating agencies. The database contains information about the dams’ locations, sizes, purposes, types, last inspections, regulatory facts, and other technical data. The information contained in the NID is updated approximately every 2 years. The NID is available at the USACE Website [https://nid.usace.army.mil/](https://nid.usace.army.mil/).

No dams were identified in the coastal areas of Mackinac County.

I.IV.ii.10  Declared Disasters

The FEMA Disaster Declarations Summary is a summarized dataset describing all federally declared disasters. This information begins with the first disaster declaration in 1953 and features all three disaster declaration types: major disaster, emergency, and fire management assistance. The dataset includes declared recovery programs and geographic areas (County data not available before 1964; fire management records are considered partial because of the historical nature of the dataset).

The list of FEMA’s disaster declarations is available at [http://www.fema.gov/data-feeds](http://www.fema.gov/data-feeds) and also by county through [https://explore.data.gov/Other/FEMA-Disaster-Declarations-Summary/uihf-be6u](https://explore.data.gov/Other/FEMA-Disaster-Declarations-Summary/uihf-be6u). Table 10 lists the major disaster declarations that have been declared in Mackinac County.

I.IV.ii.11  Flood Insurance Policies

A community’s agreement to adopt and enforce floodplain management ordinances, particularly with respect to new construction, is an important element in making flood insurance available to home and business owners. For this Discovery project, data on flood insurance policies were also gathered.
Table 11 summarizes the numbers and premiums of insurance policies, the total coverage, and the numbers and dollar amounts of paid losses in communities of the Mackinac County project area. The claim information is not specific to Lake Michigan flooding. The data is based on Community Summary Reports that were extracted from FEMA’s CIS website (https://portal.fema.gov/famsVuWeb/home) in July 2012.

I.IV.ii.12 Gage Data
The NOAA Coastal Services Center, Digital Coast, hosts a variety of digital coastal data, including gage data, and is located at http://www.csc.noaa.gov/digitalcoast.

Meteorological Stations:
The National Data Buoy Center (NDBC) is a part of the NOAA National Weather Service (NWS). NDBC designs, develops, operates, and maintains a network of data collecting buoys and coastal stations. NDBC provides hourly observations from a network of about 90 buoys and 60 Coastal Marine Automated Network (C-MAN) stations to help meet these needs. All stations measure wind speed, direction, and gust; atmospheric pressure; and air temperature. Water level is measured at selected stations. The historical and current data are available at the NDBC Website http://www.ndbc.noaa.gov/.

Table 12 shows the meteorological station identification number and location for the gages in the Lake Michigan’s Mackinac County project area.

In addition, the Great Lakes Environmental Research Laboratory is a part of NOAA focused on the Great Lakes. It maintains multiple datasets, including a collection of meteorological data for both the United States and Canada. The datasets can be found online at [http://www.glerl.noaa.gov](http://www.glerl.noaa.gov).

**Stream Gages:**
The USGS National Water Information System Web Interface ([http://waterdata.usgs.gov/nwis](http://waterdata.usgs.gov/nwis)), provides real-time data for any given stream gage location. Table 13 below shows the gage identification numbers and locations for the gages in the study areas of Mackinac County. All USGS stream gage locations are shown on the Discovery Map.

</tbody>
</table>

**Water Level Station:**
NOAA’s Center for Operational Oceanographic Products and Services (CO-OPS) maintains several water level stations along Lake Michigan. CO-OPS’ primary motivation is the collection and dissemination of high quality and accurate measurements of lake level for scientific studies.

Great Lakes water levels constitute one of the longest high quality hydrometeorological data sets in North America with reference gage records beginning about 1860 with sporadic records back to the early 1800's. The station information and water level data are available at NOAA CO-OPS Website: [http://tidesandcurrents.noaa.gov/station_retrieve.shtml?type=Great_Lakes_Water_Level_Data&state=LakeMichigan](http://tidesandcurrents.noaa.gov/station_retrieve.shtml?type=Great_Lakes_Water_Level_Data&state=LakeMichigan). The monthly high and low water level data from the year 1918 to 2011 at Lake Michigan are available at the USACE Website: [http://www.lre.usace.army.mil/greatlakes/hh/greatlakeswaterlevels/](http://www.lre.usace.army.mil/greatlakes/hh/greatlakeswaterlevels/).

Figure 2 depicts Historic Great Lakes Water Levels from 1918 to 2011 (U.S. Army Corps of Engineers, 2012).
The Great Lakes Water Levels Report provides daily mean water levels of Lake Michigan for the past three months. The data are available at the USACE website: http://www.lre.usace.army.mil/greatlakes/hh/greatlakeswaterlevels/currentconditions/greatlakeswaterlevels/.

Wave Gage/Buoy Stations:
The NDBC is a part of the NOAA National Weather Service (NWS). NDBC designs, develops, operates, and maintains a network of data collecting buoys and coastal stations. NDBC provides hourly observations from a network of about 90 buoys and 60 C-MAN stations to help meet these needs. In addition to standard meteorological observation, all buoy stations, and some C MAN stations, measure sea surface temperature and wave height and period. Conductivity and water current are measured at selected stations. The historical and current data are available at NDBC website http://www.ndbc.noaa.gov/.

I.IV.ii.13 **Great Lakes Coastal Restoration Grants**
The Great Lakes received $475 million for restoration efforts in 2010, as part of the Great Lakes Restoration Initiative, or GLRI. Michigan Sea Grant was awarded more than $1.5 million to help restore particular areas in the region and is leading two projects while assisting on five others. The projects focus on endangered fish, invasive species, beach contamination, water pollution and sound boating and marina operations. Additional information can be found at Michigan Sea Grant website http://www.miseagrant.umich.edu/explore/restoration/.
I.IV.ii.14  **Hazard Mitigation Plans**

Hazard mitigation plans are prepared to assist communities to reduce their risk to natural hazard events. The plans are used to develop strategies for risk reduction and to serve as a guide for all mitigation activities in the given county or community.

A local hazard mitigation plan is a long-term strategic/guidance document used by an entity to reduce future risk to life, property, and the economy in a community. A hazard mitigation plan has the following elements:

- A public participation process for bringing together diverse stakeholders in the jurisdiction(s) to provide an array of input into the plan
- A risk assessment to identify the hazards, determine the people and property subject to those hazards, and estimate vulnerability
- A mitigation strategy that contains goals, objectives, and an action plan to implement priority mitigation actions that reduce risk
- A maintenance process to ensure the plan is reviewed and updated
- An adoption requirement to ensure the support from participating jurisdictions

Local mitigation plans are required to be updated every 5 years to maintain eligibility for FEMA Hazard Mitigation Assistance grant programs. The status of current hazard mitigation plans is shown in Table 14. The data was obtained from FEMA’s Plan Approval Status Report based on Regional reports for the end of June 2012 (Federal Emergency Management Agency, May 2012).

<table>

</tbody>
</table>

I.IV.ii.15  **Hazard Mitigation Grant Program**

After a major disaster declaration, the Hazard Mitigation Grant Program (HMGP) provides grants to states and local governments to implement long-term hazard mitigation measures. The purpose of the HMGP is to reduce the loss of life and property due to natural disasters and to enable mitigation measures to be implemented during the immediate recovery from a disaster.

A variety of hazard mitigation projects have been submitted for FEMA’s HMGP. A summary of HMGP projects can be downloaded from [https://explore.data.gov/catalog/raw](https://explore.data.gov/catalog/raw).
Historical Flooding & High Water Marks

According to the 2006 Mackinac County Hazard Mitigation Plan, flooding caused by too much precipitation and shoreline flooding is most common in Mackinac County. Shoreline flooding is the flooding and erosion that occurs along shoreline areas caused by high Great Lakes water levels, storm surges, and winds (Eastern Upper Peninsula Regional Planning & Development Commission, 2005).

During times of excessive precipitation, flooding tends to occur in streets when rainwater cannot flow into a storm sewer. Basements tend to flood in those situations when rainwater cannot flow away from the house or when sewers back up. These problems are usually not caused by heavy local rains and are often not related to overbank flooding or current floodplain locations.

In 1993, three flooding events were recorded in January, March, and April. Mackinac County was affected, but not nearly as much as the Lower Michigan counties.

On July 31, 1999, a few inches of standing water developed on local streets. A bow echo moved east across much of the eastern upper and northern lower Michigan ahead of a cold front moving over the upper Midwest. Numerous reports of straight line wind damage were associated with the bow. Storms with heavy rain ahead of the bow caused some flooding across Mackinac County.

In April 2001, a combination of runoff from snowmelt and rainfall resulted in minor flooding primarily along the Pine River in the Upper Peninsula.

Garfield Township has experienced flooding in Mill Pond Park when water levels were high. Some walkways and sitting structures were exposed to the increased water level. Increased development along lake shorelines also can be exposed to flooding situations when water levels are high.

Bois Blanc Island Township has experienced flooding problems when lake levels are high, which has caused erosion and problems with septic systems.

All townships, with the exception of Portage Township, have Great Lake shorelines which, during times of high water tables, are exposed to flooding and erosion (Eastern Upper Peninsula Regional Planning & Development Commission, 2005).

During the Discovery process, stakeholders identified the following additional areas of historical flooding:

- Ice build-up at the mouth of Black and Pine Rivers during winter snow melts causes a jam where the rivers meet at Lake Michigan. The Rivers then back up and can cause serious flooding and well contamination issues.
- Depending on lake levels, there are some potential flooding issues near St. Ignace.
Past flooding issues have occurred in the Brevort area when lake levels were higher. No high water mark data was collected during this Discovery process. If local stakeholders have available high water mark data, historical flooding information, or historic flooding photographs they are encouraged to submit them to FEMA Region V Mitigation Division.

I.IV.ii.17 Land Use
The Mackinac County Master Plan discusses existing and future land use for Mackinac County, and can be found at http://www.mackinaccounty.net/county-info-a-links/master-plan.html. The purpose of the master plan was to help in the development of goals, objectives and future recommendations as it relates to land use. Current planning efforts in Mackinac County build upon prior accomplishments in local planning and zoning. Local Master Plans can be downloaded at http://www.mediafire.com/euprpdc#61bcgix8vjeq1

A Comprehensive Plan for Mackinac County was adopted in 1966. Currently, the county has no zoning in place, and there is no intent to establish countywide zoning. Eight of the eleven townships in Mackinac County operate their own planning and zoning programs. The three remaining townships, Hendricks, Hudson, and Newton, have no local plans or zoning ordinances because they have smaller populations and large public land space. In Michigan land use law, township-level plans and zoning ordinances take priority over county actions and counties may not plan or zone for incorporated communities. The City of St. Ignace and the City of Mackinac Island administer their own separate planning and zoning programs. Thus, the Mackinac County Master Plan does not replace adopted township or municipal plans and zoning ordinances, but instead the county plan seeks to compliment and incorporate existing local plans (Mackinac County Planning Commission, 2007).

I.IV.ii.18 Letters of Map Change
A Letter of Map Change (LOMC) is a letter that reflects an official revision to an effective NFIP map. LOMCs are issued in place of the physical revision and republication of the effective FIRM. LOMCs include completed cases of Letters of Map Amendment (LOMAs) and Letters of Map Revision (LOMRs), including LOMRs based on fill (LOMR-Fs), and conditional LOMRs. The lists of LOMC cases were obtained from the FEMA Mapping Information Platform Website (https://hazards.fema.gov/femaportal/wps/portal) in June 2012.

Table 15 lists the number of LOMCs in the county. No Conditional LOMAs or Conditional LOMR-Fs were included. The LOMCs are shown on the Discovery Maps. Clusters of LOMCs indicate a need for updated maps.
Table 15. Summary of LOMC cases in Mackinac County

<td>Riverine/Lake Flooding, Transportation Accidents, Infrastructure Failure</td>
<td>Early warning of potential flooding to provide for possible evacuation of buildings and residences or traffic re-routing due to road closures caused by flooding.</td>
</tr>
</tbody>
</table>

Users of this report should note that the Mackinac County Hazard Mitigation Plan expired in May of 2006 and an update is currently underway as of the date of this report. The 2006 plan, plus information about the efforts to update the plan, is located at [http://www.eup-planning.org/index.php?page=Natural_Hazards_Mitigation_Planning#HM06](http://www.eup-planning.org/index.php?page=Natural_Hazards_Mitigation_Planning#HM06)
The State Hazard Mitigation Plan, updated March 2011, sets forth a State-wide plan for mitigation planning and provides guidance to local communities for identifying mitigation strategies and implementing mitigation actions. While the plan addresses a variety of hazards within the State, the following was captured from the plan regarding flooding (Michigan Department of State Police, Emergency Management and Homeland Security Division, 2011):

In developing mitigation recommendations and implementation strategies for the hazards addressed in this plan, the following general guiding principles have been followed to the extent possible:

- Non-structural measures have been emphasized over structural measures.
- Voluntary measures have been emphasized over mandatory measures.
- Education-based compliance and cooperation has been emphasized over legislated mandates.
- The least expensive alternative has, in general, been emphasized over more expensive alternatives.

Furthermore, the following additional principles will govern the development and implementation of flood hazard mitigation recommendations:

- NFIP-participating communities will have priority over non-participating communities.
- Communities/sites suffering repetitive losses will have greater emphasis.
- Flood mitigation projects will, to the extent possible, be implemented in the following order of priority:
  1. Acquisition and relocation or elevation of flood prone structures.
  2. Drainage projects (culverts, channels, retention/detention ponds, etc.).
  3. Wet and dry flood proofing of structures.
  4. Structural measures (floodwalls, dikes, jetties, etc.).

During this Discovery process, Areas of Mitigation Interest (AoMI) were identified by the local stakeholders and should be considered for future mitigation actions and incorporation into Hazard Mitigation Plan updates:
• Ice build-up at the mouth of Black and Pine Rivers during winter snow melts causes a jam where the rivers meet at Lake Michigan. The Rivers then back up and can cause serious flooding and well contamination issues. Mitigation action identified was to elevate well heads.

• Depending on lake levels, there are some potential flooding issues near St. Ignace.

• Past flooding issues have occurred in the Brevort area when lake levels were higher.

I.IV.ii.20 Ordinances
Local regulations regarding development within known flood hazard areas can range from ordinances with minimum NFIP requirements to strong, pro-active ordinances that not only regulate and protect new and improved development in existing Special Flood Hazard Areas (SFHAs) but also seek to mitigate the growth of SFHAs caused by increased runoff from developed areas and the degradation of natural flood control areas, such as wetlands and forests.

Title 44 of the Code of Federal Regulations Sections 60.3(a)–(e) describes the NFIP floodplain ordinance levels and provides the minimum requirements for community participation in the NFIP. The proper ordinance level for each community is determined by the type of flooding that is present within the community. Ordinance levels are shown in the table below:

<table>
<thead>
<tr>
<th>Ordinance Level</th>

</tr>
</tbody>
</table>

Ordinance level information for Mackinac County communities within the project area was researched using FEMA’s Community Information System (CIS) in December 2012. CIS contained no information on ordinance level for Mackinac County communities in the project area and therefore the data could not be compiled for this Discovery Report.

I.IV.ii.21 Proposed Draft Transects
Transects are profiles along which coastal flooding analysis is performed. Transects are used to transform offshore conditions to the shoreline and are used to define coastal flood risks inland of the shoreline. They are placed to define representative profiles for a shoreline reach. The transect layout for coastal hazards analysis and subsequent floodplain delineation is determined by physical factors such as changes in topography, bathymetry, shoreline orientation, and land cover data, in addition to societal factors such as variations...
in development and density. The base maps listed earlier in this section (i.e. LiDAR, bathymetry) were reviewed, or will be reviewed once available, to determine revisions to the draft placement for hazard modeling transects along the Lake Michigan shoreline.

The originally proposed draft transect layout is shown on the draft Discovery Map for Mackinac County (Attachment C) and includes an identification number per transect. Note that these identification numbers will change as the draft transects are revised in the future.

Stakeholders were provided with the proposed draft transect shapefiles (GIS digital data) upon request, and the proposed draft transects (Attachment D) were also reviewed by stakeholders during and after the Discovery Meeting. Input from local officials was requested regarding the placement and the number of transects. The detailed comments collected can be found in Attachment E, Stakeholder Comments from Discovery Process. The ID numbers in this table correspond to the location of the comment, which is shown on the Final Discovery Maps in Appendix R of the basin-wide Lake Michigan Discovery Report and is not an attachment within this county-based report (Federal Emergency Management Agency, 2013).

Below is a summary of the comments received and addressed for the proposed draft transects along the Lake Michigan shoreline in Mackinac County:

- Stakeholders identified a large area of the shoreline as being part of a State Park and Federal Land with few to no structures and suggested transects be removed in this area.
- Stakeholders identified areas of flood concern where draft transects had already been placed.

All comments were reviewed and incorporated where possible and a revised proposed draft transect layout was created. This revised transect layout can be found on the Final Discovery Maps in Appendix R of the Lake Michigan basin-wide report (Federal Emergency Management Agency, 2013). It should be noted that these transects remain subject to change pending future coastal analysis and additional discussions with stakeholders regarding further reduction in the number of transects.

I.IV.ii.22 Pre-Disaster Mitigation Program

The Pre-Disaster Mitigation (PDM) program is a nation-wide competitive grant program that was created to assist State and local governments, including Indian Tribe governments, with the funding to implement cost-effective hazard mitigation activities prior to disasters. The intent of this program is to reduce overall risk to people and property, while also minimizing the cost of disaster recovery. Grants awarded during past fiscal years can be downloaded from the Pre-Disaster Mitigation Archives at http://www.fema.gov/pre-disaster-mitigation-grant-program/pre-disaster-mitigation-archives.
I.IV.ii.23  **Public Assistance (PA) Grant Program**
The mission FEMA’s Public Assistance (PA) Grant Program is to provide assistance to State, Tribal and local governments, and certain types of Private Nonprofit organizations so that communities can quickly respond to and recover from declared disasters or emergencies.

Through the PA Program, FEMA provides supplemental Federal disaster grant assistance for debris removal, emergency protective measures, and the repair, replacement, or restoration of disaster-damaged, publicly owned facilities and the facilities of certain Private Non-Profit (PNP) organizations. The PA Program also encourages protection of these damaged facilities from future events by providing assistance for hazard mitigation measures during the recovery process.

Detailed project descriptions for completed PA projects can be downloaded from [https://explore.data.gov/catalog/raw](https://explore.data.gov/catalog/raw).

I.IV.ii.24  **Regulatory Mapping**
The effective mapping status for communities in the Mackinac County project area is listed in Table 17. Mackinac County has not yet been modernized to digital mapping.

*NSFHA = No Special Flood Hazard Areas identified

Effective FIRMs and FISs can be downloaded from FEMA’s Map Service Center (MSC) at [https://msc.fema.gov](https://msc.fema.gov).

I.IV.ii.25  **Repetitive Loss/Severe Repetitive Loss**
A Repetitive Loss (RL) property is any insurable building for which two or more claims of more than $1,000 were paid by the NFIP within any rolling ten-year period, since 1978. A
RL property may or may not be currently insured by the NFIP. There are currently over 122,000 repetitive loss properties nationwide.

Structures that flood frequently strain the National Flood Insurance Fund. In fact, the RL properties are the biggest draw on the Fund. FEMA has paid almost $3.5 billion dollars in claims for RL properties. RL properties not only increase the NFIPs annual losses and the need for borrowing funds from Congress, they drain funds needed to prepare for catastrophic events. Community leaders and residents are also concerned with the RL problem because residents' lives are disrupted and may be threatened by the continual flooding.

Over the years, there have been a number of efforts aimed at addressing repetitive losses. Depending on individual circumstances, appropriate mitigation measures commonly include elevating buildings above the level of the base flood, demolishing buildings, and removing buildings from the SFHA as part of a flood control project. Sometimes, mitigation takes the form of a local drainage-improvement project that meets NFIP standards and removes a property or properties from RL or Repetitive Loss Target Group (RLTG) status.

The Repetitive Flood Claims (RFC) grant program was authorized by the Bunning-Bereuter-Blumenauer Flood Insurance Reform Act of 2004 (P.L. 108–264), which amended the National Flood Insurance Act (NFIA) of 1968 (42 U.S.C. 4001, et al). Up to $10 million is available annually for FEMA to provide RFC funds to assist states and communities reduce flood damages to insured properties that have had one or more claims to the NFIP. Additional information on this program and other related programs is available at http://www.fema.gov/hazard-mitigation-assistance.

Repetitive losses were reviewed in FEMA’s CIS “Community Disaster Detail – Flood Insurance” report. No repetitive loss data was found for the communities in Mackinac County in this study area.

I.IV.ii.26 Socio-Economic Analysis
Information on demographics and socioeconomic trends can be found at the Eastern Upper Peninsula Regional Planning & Development website at http://www.eup-planning.org/index.php?page=Data_Center_-_Census_Information and Michigan Department of Technology, Management, and Budget at http://www.michigan.gov/cgi/0,1607,7-158-54534---,00.html.

In Mackinac, tourism has become the main industry in recent decades. These Upper Peninsula counties have extensive coastline on Lake Michigan and ample areas of state and national forests, which contribute to the tourism opportunities.

Over the past 10 years, the Mackinac County population experienced a decline of 6.9 percent, from 11,943 people in 2000 to 11,113 people in 2010 (U.S. Census Bureau, 2010). From the Eastern Upper Peninsula Regional Planning & Development website, a group of
stakeholders are beginning the process of developing a Regional Growth Strategy for the Eastern Upper Peninsula Region. Regional Planning will be assisting this group in facilitating discussions to identify strategies and tactics in order to develop this plan.

In 2009, lake-related businesses in Mackinac County provided 26.3 percent of the total jobs in the County. This accounted just over 1,100 jobs, $25 million in wages, and $63 million in goods & services. This represents a 12 percent decrease in lake jobs since 2005 (National Oceanic & Atmospheric Administration, 2009).

I.IV.ii.27  State-level Datasets, Programs, and Information

The information in this section was compiled by the project team throughout this Discovery process based on research of the project area and discussions with local and regional stakeholders.

Michigan Coastal Zone Enhancement Program Assessment and Strategy (2011-2016):
Every five years, the Coastal Zone Management Act encourages states and territories to conduct self-evaluations of their coastal management programs to assess significant changes in the state’s coastal resources and management practices, identify critical needs, and prioritize areas for enhancement under the Coastal Zone Enhancement Program. More information on this program can be found at http://coastalmanagement.noaa.gov/enhanc.html. The Coastal Zone Enhancement Program Assessment and Strategy can be downloaded at http://coastalmanagement.noaa.gov/mystate/docs/mi3092011.pdf.

The Michigan Coastal Management Program website located at www.mi.gov/coastalmanagement provides information on the Program including information on its permitting, coastal planning, and technical assistance programs. Michigan's Coastal Management Program was developed under the federal Coastal Zone Management Act and approved in 1978. Since then, the Program has assisted organizations in protecting and enhancing their coastal areas, funded studies related to coastal management, and helped to increase recreational opportunities in Michigan's Great Lakes coastal area.

Coastal Zone Boundary maps can be downloaded at http://www.michigan.gov/deq/0,4561,7-135-3313_3677_3696-90802--,00.html

A list of previously awarded coastal management grants can be found here: http://www.michigan.gov/deq/0,4561,7-135-3313_3677_3696-171451--,00.html
V. **Risk MAP Projects and Needs**

This section provides information about the planned next steps for the Lake Michigan GLCFS, including information about the upcoming coastal analysis, potential for mitigation technical assistance within the project area, potential for changes in compliance as a result of the coastal flood study, future communications, and how unmet needs will be addressed.

i. **Future Coastal Study**

Information and data collected as part of this Discovery effort and provided in this report will be utilized in the upcoming coastal flood study for Lake Michigan.

A summary of the GLCFS project, as well as project updates, can be found at [http://www.greatlakescoast.org/](http://www.greatlakescoast.org/) under the “Great Lakes Coastal Analysis & Mapping” section.

The following work is expected to be performed for Lake Michigan as part of the GLCFS, pending congressional funding. The scope of work described in this section is therefore subject to change and may not be performed within all Lake Michigan communities.

All engineering and mapping analysis performed as part of this study will follow guidance provided within FEMA’s Draft *Guidelines and Specifications for Coastal Studies Along the Great Lakes*, issued on May 8, 2012 (Federal Emergency Management Agency, 2012). The upcoming study is expected to include the following tasks: creation of bathymetric and topographic data, base map acquisition, coastal flood hazard analysis, and risk assessment product development. A summary is provided below and additional detail may be found in FEMA’s basin-wide Lake Michigan Discovery Report (Federal Emergency Management Agency, 2013).

**Engineering & Mapping:**

Coastal flood hazard analyses for the coastal communities of the United States located along the Lake Michigan shoreline will be performed. This analysis will include the creation of bathymetric and topographic map data inventory, base map acquisition, and coastal flood hazard analysis.

Draft coastal flood maps (or workmaps) will be produced for the study area. The workmaps will include the 1-percent- and 0.2-percent-annual chance flood hazard areas, Coastal High Hazard (VE Zone) and Coastal A Zone (AE Zone), Base Flood Elevations (BFEs), and Limit of Moderate Wave Action (LiMWA) boundary. The LiMWA boundary identifies the 1.5-foot wave height line and alerts property owners that although their property is in a Zone AE area, it may also be affected by waves 1.5 feet or higher. Communities will be provided with an opportunity to review the workmaps after the coastal analysis is complete and prior to FIRM production.
National Flood Insurance Program Integration:
Regulatory FIRM files may be updated through the FEMA’s Physical Map Revision (PMR) process using the results from the work performed in the Engineering and Mapping task described above.

The final production and distribution of updated FIRMs will be dependent on the results of the coastal analysis, discussions with the communities, and congressional funding. Therefore, it cannot be identified at this time the exact communities that will receive updated FIRMs that may require adoption. The risk assessment products and their distribution, discussed below, are also dependent on the results of the coastal analysis and further community discussions and are subject to change.

Risk Assessment Products:
Depending on available data, results of coastal analysis, local needs identified, local partnerships, and fiscal year funding, the coastal flood risk products such as Flood Risk Map, Flood Risk Report, Changes Since Last FIRM (CSLF), Flood Depth and Analysis Grids, and Hazus-MH analyses may be generated for identified coastal communities. Optional Flood Risk Assessment products such as coastal wave height grids, erosion risk determination, and wave hazard severity area datasets have not yet been funded. Table 18 summarizes the products projected for the coastal communities in this project area.

ii. Potential for Mitigation Assistance

As part of a Risk MAP project, Mitigation Planning Technical Assistance (MPTA) may be available to help communities plan for and reduce risks by providing communities with specialized assistance. MPTA includes risk assessment, mitigation planning, and traditional hazard identification (flood mapping) activities. Technical assistance through MPTA can be performed at any time during the hazard mitigation planning process.

Determining which communities receive MPTA is dependent on identification of a need, the willingness of a community to partner with FEMA, local resources and data availability, and federal funding availability. Unfortunately, not every community will be able to receive MPTA as part of a Risk MAP project. Forming a partnership between FEMA and a local community is an essential part of initiating a MPTA project. Assistance will be prioritized after all data and information is collected and assessed by FEMA in coordination with the local communities to determine where MPTA resources would be
beneficial. Communities should alert FEMA of any resources that are available at the local level, and of actions they are interested in implementing in partnership with FEMA. Technical assistance activities should be based on the needs of the community and assist with already established capabilities.

Some technical assistance activities could include (but are not limited to):

- Advising in the creation of initial Hazard Mitigation Plans
- Advising in the update of existing Hazard Mitigation Plans
- Training to improve a community’s capabilities for reducing risk
- Assistance in incorporating flood risk datasets and products into potential and effective community legislation, guidance, regulations, procedures, etc.
- Assistance with the creation, acquisition and incorporation of GIS data into potential and effective maps, planning mechanisms, emergency management procedures, etc.
- Facilitating the identification of data gaps and interpret technical data to identify risk reduction deficiencies that should be corrected.

Stakeholders noted during this Discovery process that the Mackinac County Hazard Mitigation Plan update is currently underway. It is recommended additional discussion occur between FEMA and these stakeholders as this coastal flood study moves forward to see if MPTA would be an appropriate and beneficial supplemental option.

Continued discussion regarding FEMA partnership with local communities to assist in developing new mitigation actions and moving those actions forward will be essential as this coastal project moves forwards.

iii. Compliance

FEMA uses a number of tools to determine a community’s compliance with the minimum regulations of the NFIP. Among them are Community Assisted Contacts (CACs), Community Assistance Visits (CAVs), the Letter of Map Change (LOMC) process, and Submit-for-Rates. These tools help assess a community’s implementation of their flood damage reduction regulations and identify any floodplain management deficiencies and violations.

If administrative problems or potential violations are identified, the community will be notified and given the opportunity to correct those administrative procedures and remedy the violations to the maximum extent possible within established deadlines. FEMA or the state will work with the community to help them bring their program into compliance with NFIP requirements. In extreme cases where the community does not take action to bring itself into compliance, FEMA may initiate an enforcement action against the community.

After coastal analysis is completed for this study, communities may be faced with adopting
new regulations related to coastal high hazard areas. An understanding of regulations associated with coastal areas will be important so that communities remain compliant. During this Discovery process, stakeholders were provided with information regarding NFIP requirements that are associated with coastal hazard zones, as well as information about new FEMA guidance related to moderate wave action.

These compliance topics, including coastal Special Flood Hazard Areas (SFHAs), building requirements in VE Zones, and Limit of Moderate Wave Action (LiMWA), are discussed in detail at http://www.greatlakescoast.org and in the basin-wide Lake Michigan Discovery Report (Federal Emergency Management Agency, 2013).

iv. Communication

Throughout this Discovery process, community representatives and local stakeholders indicated the need to be kept informed about the results of Discovery, the upcoming coastal flood study, and opportunities for public input throughout the study process.

Throughout this study process, Federal, State, and local stakeholders will be kept informed via email, phone calls, letters, newsletters, and meetings as appropriate. A dedicated email account was created (GreatLakesFloodStudy@STARR-Team.com) to distribute project information, meeting reminders, and summaries.

Stakeholder involvement will continue to be important through the remainder of the project. The GLCFS website http://www.greatlakescoast.org is an excellent resource where stakeholders can obtain the most up-to-date information about the status of the Great Lakes flood study projects, data collection, upcoming meetings, new technical reports, the latest methodologies, factsheets, and additional information. FEMA encourages stakeholders to remain involved throughout the study process and will seek to identify partnership opportunities during the study process.

v. Unmet Needs

During this Discovery process, stakeholders provided FEMA with a wide variety of information. Some of the information, while valuable, may not be able to be utilized in the upcoming coastal study. In addition, some questions may be unresolved as of the end of this Discovery process. This section seeks to summarize those unmet needs and to provide the steps that may be taken to address them in the future.

During the Discovery Meetings and throughout the Discovery process, Lake Michigan stakeholders were concerned about what to expect in terms of extent of new SFHA boundaries, the possible introduction of VE Zones, the number of property owners who would be affected, and the additional NFIP requirements and flood insurance costs that may go along with a flood map revision. FEMA acknowledged this concern, adding that upcoming engineering and mapping tasks include the distribution of workmaps and other
flood risk products designed to give local stakeholders an opportunity to review and comment on flood risk data before the data is carried into NFIP FIRM maps.

In addition, comments related to the proposed draft transects were provided during the Discovery Meeting by local stakeholders. Those comments were incorporated into an updated draft transect layout where possible. However, it should be noted that the draft transects proposed in this report remain subject to change pending future coastal analysis and discussions with stakeholders regarding reduction in the total number of transects along the shoreline. Stakeholders will be made aware of revised transect locations via the future workmaps that will be provided to local communities for review as the study moves forward.

VI. Close

Federal, State, and local stakeholders that were involved in this Discovery process contributed valuable information about Lake Michigan, including information and data that may be utilized in the upcoming Lake Michigan coastal flood study. The data and opportunities presented in this report will be considered as the study process moves forward and will assist the project team as the Lake Michigan coastal flood study proceeds. FEMA encourages continued participation and engagement from stakeholders throughout this coastal flood study.

The ultimate goal of this Discovery process and the future coastal flood study is to provide updated flood risk information to local stakeholders and to increase awareness of those flood risks, which in turn leads to actions that reduce risk.

COASTAL DATA REQUEST FORM
Community Discovery Coastal Data Request Form

Thank you for taking the time to complete this questionnaire. We are interested in obtaining coastal-specific data for your community. It will provide important information to help FEMA understand coastal flood risk issues in your community and to work with you in increasing your community’s resilience to coastal flooding through implementation of the Risk MAP program. In addition, this form can be used as a way to prepare for the upcoming Discovery Meeting, as the topics on this form will be discussed throughout the meeting.

Once you have completed the questionnaire, please return the form:

Via e-mail:  GreatLakesFloodStudy@starr-team.com
By mail:  Scott Banjavcic
CDM Smith/STARR
125 S. Wacker Drive, Suite 600
Chicago, IL 60606

Please provide as much information as possible. If you have any questions about the Discovery process or about completing this questionnaire, please contact:

Laura Keating, Laura.Keating@starr-team.com, 925-296-8048

Keating, Laura

Subject: FEMA Invitation to Lake Michigan/Lake St. Clair Discovery Kickoff Meeting WebEx for Michigan Core Stakeholders

Location: NEW Phone: (877) 537-6647 Conference ID: 31578 and NEW WebEx

Start: Thu 6/21/2012 11:00 AM
End: Thu 6/21/2012 12:30 PM
Show Time As: Tentative

Recurrence: (none)

Meeting Status: Not yet responded

Organizer: Keating, Laura

Required Attendees: 'Alan Lulloff'; 'Byron Lane (MDEQ)'; 'Catrina Covino'; 'Eric Kuklewski'; 'Erin Maloney'; 'Ernie Sarkipato (MDEQ)'; 'Greg Mausolf (USACE)'; 'Heather Stirratt (NOAA)'; Hillier, Timothy; 'Holly Davis'; 'Jennifer Day (NOAA)'; 'Jerry Fulcher (MI CZM)'; 'Joel Pepper'; 'Julie Tochor'; Keating, Laura; 'Ken Hinterlong'; 'Les Thomas (MDEQ)'; 'Linda Burke (MDEQ)'; 'Maria Zingas (MDEQ)'; 'Mary Weidel (USACE)'; 'Matt Occhipinti (MDEQ)'; 'Matt Schnepf'; 'Michelle Hohn'; 'Mike Hanke'; 'Patrick Durack (MDEQ)'; Randhawa, Jaspreet; 'Richard Foody'; 'Sheila Meier (MDEQ)'; 'Stephen Aichele (USGS)'; 'Susan Conradson (MDEQ)'; 'Tom Smith'; 'Wayne Lasch'; breederl@msu.edu; 'Roberts, Stacey'; Denick, Roger (Roger.Denick@stantec.com); jread@glos.us

Optional Attendees: Luce, Janet K; Breederland, Mark; Tabar, Jeffrey R

Good Afternoon,

In preparation for this call tomorrow at 1pm CT/2pm ET, please find attached the agenda, as well as a couple handouts that we will discuss during the call.

Also, please note the updated WebEx and call-in number:

**WebEx information:**

Meeting Number: 652 104 155
Meeting Password: This meeting does not require a password.

**Audio Conference information:**
Phone: (877) 537-6647
Conference ID: 31578

Thanks,
Laura Keating
Good Afternoon,

Please note the date change that was made to better accommodate schedules.

As you may know, the Federal Emergency Management Agency (FEMA), in cooperation with the U.S Army Corps of Engineers (USACE), the Association of State Floodplain Managers (ASFPM), and other partners, is conducting a comprehensive study of flood hazards for Lake Michigan coastal communities and along the United States shoreline in other areas of the Great Lakes system. Data from this study will eventually be used to revise Flood Insurance Rate Maps (FIRMs) for coastal communities throughout the region.

As part of the Great Lakes Coastal Flood Mapping and Outreach initiative, STARR (which stands for Strategic Alliance for Risk Reduction) has been contracted by FEMA to perform Discovery for all Lake Michigan coastal communities within Wisconsin, Illinois, Indiana, and Michigan. In addition, STARR will perform Discovery for St. Clair, Macomb and Wayne Counties along Lake St. Clair in Michigan. The Discovery process allows us to engage the communities and other local stakeholders to initiate risk discussions and increase visibility of flood risk information.

You have been identified as a Core Stakeholder for the Lake Michigan and Lake St. Clair Discovery Projects in the State of Michigan. FEMA and STARR would like to hold a one-hour Kickoff Meeting via WebEx/conference call to introduce you to the Discovery process, including identifying Discovery goals and objectives for the Lake Michigan and Lake St. Clair coastal communities in the State of Michigan. We will also review the Lake Michigan and Lake St. Clair Discovery Meeting Plan and discuss State-specific requirements.

You may have recently received a similar Discovery Kickoff Meeting invitation for another State. Although some of the information presented at the other WebEx meetings will be the same, we will be discussing items specific to those counties in Michigan and request that you attend this WebEx as well.

In the past few months, STARR may have already contacted you to participate in a Lake Michigan or Lake St. Clair Technical Workshops. Discovery is another part of the project, and we require your input and feedback to ensure study success. The community-based Discovery Meetings are held following Technical Workshops. Below are the tentative Lake Michigan and Lake St. Clair Discovery Meeting dates for the State of Michigan:

Lake Michigan:

</table>
Please let me know if the proposed time on this meeting invitation (1pm CDT/2pm EDT) is acceptable. We are trying to determine the best time for everyone to participate in the Lake Michigan and Lake St. Clair Discovery Kickoff Meeting WebEx for the State of Michigan.

We look forward to discussing this project with you during the call. Please do not hesitate to contact me if you have any questions.

Sincerely,

Laura Keating, CFM

Questions/Comments?
Good Afternoon,

You are receiving this meeting invitation because you have been identified as a Lake Michigan local community stakeholder. You should have recently received an invitation in the mail from the Federal Emergency Management Agency (FEMA), regarding the Great Lakes Coastal Flood Study effort, inviting you to attend a Discovery Meeting in August, as well as this information exchange session, scheduled for Wednesday, July 25th at 10am ET. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

While the WebEx and call-in information was provided in the letter, I wanted to also provide this information to you via email to serve as a reminder. Below is the call-in and WebEx information:

Date/Time: Wednesday, July 25, 2012; 10:00 - 11:00 am ET
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php
Meeting Number: 445288484
Call in number: 1-866-398-2885
Participant Code: 197462

This informal session will begin the process of learning about your available local coastal data, hazard mitigation strategies, and what the critical flooding issues are in your community so that we can then work with you to determine how to best utilize that information during FEMA’s Great Lakes study. A data request form is attached to help facilitate the discussion. We encourage open discussions throughout this meeting and will use the information to better cater our upcoming Discovery Meetings as well. Attendees of this conference call, as well as the Discovery Meetings, may include, but certainly are not limited to, community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners.

We look forward to speaking with you on Wednesday, and appreciate your participation in this process. If you have any questions, or are not able to attend this session but would like to learn more, please do not hesitate to contact me directly. My information can be found below.

Thanks,
Laura
Information Exchange Session for Lake Michigan Discovery

Mackinac County
July 25, 2012
10am – 11am
Purpose of Information Exchange

- Introduction to Risk MAP
- Introduction to Great Lakes Flood Study and Discovery
- Learn more about your areas of concern, coastal flood risk, and coastal mitigation
- Bring the right people to the table early
- Identify data gaps
Risk MAP (Mapping, Assessment, and Planning) Vision

Goals
1. Address gaps in flood hazard data
2. Increase risk awareness to encourage risk reduction
3. Risk-based Mitigation Planning resulting in risk reduction actions
4. Enhanced digital platform to improve communication and sharing of risk data
5. Align programs and develop synergies
Overview of Great Lakes Coastal Flood Study

- Latest models, data, and technology
- Deliver updated flood maps and flood risk datasets
- Equip Federal Agencies, eight States and hundreds of coastal communities with data and planning tools to facilitate actions to enhance resiliency of the Great Lakes ecosystem
Recent community hazard mitigation experiences?
- *Public Works*
- *Building Standards*
- *Community Planning and Hazard Mitigation Plan Update*
- *Communication Processes, GIS, etc.*

New option to document ideas and actions through the FEMA Mitigation Action Form

Draft Discovery Meeting Agenda

- Why are we here?
- Coastal mapping and flood risk topics to be aware of
- How does this apply to my community?
  - NFIP compliance, hazard mitigation opportunities, and grant funding
- Interactive Session
  - Utilization of Coastal Flood Risk Products for Planning and Mitigation, Identification of Existing Local Coastal Data, View and Discuss Local Coastal Areas of Concern Using the Discovery Map, Discuss Mitigation Action Opportunities and Introduce the Mitigation Action Form
- Wrap Up

Draft Transect Map Station: Talk to technical staff about draft transects and view draft transects in GIS
Mitigation Resources, Strategies, and Actions Station: Talk with FEMA and State staff about areas of concern and potential mitigation actions to help reduce risk. Fill out Mitigation Action Form.
Great Lakes Coastal Flood Study

Discovery Products

- **Final Discovery Report**
  - Single, comprehensive report for all of Lake Michigan, with appendices for each coastal community by county
  - Includes pre-discovery data, meeting agenda, sign-in sheets, discussion topics, decisions made, etc.

- **Final Discovery Maps**
  - Including feedback from participants
  - Visual representation of meeting outcomes

---

Who Should Attend the Discovery Meeting?

- **Community Officials**
  - CEO and Floodplain Administrators (FPAs)
  - Planners, GIS Specialists, Engineers, Outreach Specialists, Emergency Managers, and Community Leaders

- **State Representatives**
  - State Hazard Mitigation Officer (SHMO), National Flood Insurance Program (NFIP) Coordinators, Cooperating Technical Partners (CTPs)

- **Other Federal Agencies (NOAA, USACE, USGS)**

- **Regional Planning Agencies**

- **Great Lakes Organizations**

Data Request Form Overview

- Contact Information
- Base Map Data
- Coastal Data
- Other Data
- Historic Flood Data
- Risk Assessment
- Flood Mitigation Information
- Community Plans and Projects
- Any Other Comments/ Concerns Based on Local Knowledge
Review of Data Collected To Date

- Draft Transects
- Shoreline Classification Dataset
- Hazard Mitigation Plans
- Hazard Mitigation Grants Program (HMGP) projects
- Pre-Disaster Mitigation Program projects
- Declared Disasters
- Repetitive loss claims by community
Next Steps and Opportunity to Get Involved

- Assessment of data and information provided
- Identification of best practices:
  - Do you have an example of a local coastal mitigation best practice?
- Discovery meeting involvement:
  - Are you interested in participating in Discovery Meeting facilitation?

THANK YOU FOR YOUR PARTICIPATION!

Ms. Ginny Dahlin
Supervisor and Assessor, Bay De Noc Township
Township Hall
5870 County 513 T Road
Rapid River, Michigan 49878

Re: Invitation to Attend Community Meetings Regarding Lake Michigan Coastal Flood Risk

Dear Ms. Dahlin:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. Please see enclosed Risk MAP Flood Risk Products Fact Sheet. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

Your Discovery Meeting is scheduled to occur:

Date/Time: Tuesday, August 14, 2012; 2:00 - 4:00 pm ET
Location: Bay de Noc Community College, Rooms 958 & 962
Address: 2001 North Lincoln Road
Escanaba, Michigan 49829

Please save this date on your calendar. At the meeting, we will review the coastal flood risk data we have gathered to date and discuss your community’s coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Please RSVP to FEMA’s study contractor (STARR) Scott...

Banjavcic at (312) 780-7755 or email to GreatLakesFloodStudy@starr-team.com no later than August 3, 2012. Please reference the Discovery Meeting date and time in your RSVP.

So that we can better prepare for the upcoming Discovery Meeting, we are asking local communities to participate in an Information Exchange conference call and WebEx. This call will provide an overview of FEMA’s Risk MAP program and the Discovery process, and will allow us to review with you our request for the exchange of coastal flood risk and hazard mitigation data, and to learn more about your community’s coastal flood hazard risks and needs, in advance of the Discovery Meeting. The partnership and exchange of data between FEMA, the State, and your community is vital to the success of identifying flood risks and needs that may impact your citizens.

The Information Exchange conference call is scheduled to occur:

Date/Time: Thursday, July 26, 2012; 10:00 - 11:00 am ET
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php
Meeting Number: 445288484
Call in number: 1-866-398-2885
Participant Code: 197462

If you or another community representative is unable to attend the Information Exchange conference call, we ask that you fill out and return the enclosed data request form by August 3, 2012. This is the same data request form that will be discussed during the conference call. The completed form can be sent to:

Via e-mail: GreatLakesFloodStudy@starr-team.com
By mail: Scott Banjavcic  
CDM Smith/STARR  
125 S. Wacker Drive, Suite 600  
Chicago, Illinois 60606

We look forward to working with you to reduce the risks associated with coastal flooding and increase your community’s resiliency for the long term. To learn more about Discovery, please visit http://www.fema.gov/library and search keywords “Discovery brochure” or contact Ken Hinterlong, FEMA Region V Senior Engineer, at (312) 408-5529, or by email at ken.hinterlong@fema.dhs.gov. We look forward to discussing this with you during the Information Exchange call and/or seeing you at the upcoming Discovery Meeting.

Sincerely,

Christine Stack  
Division Director

Please reference the Discovery Meeting date and time in your RSVP.
So that we can better prepare for the upcoming Discovery Meeting, we are asking local communities to participate in an Information Exchange conference call and WebEx. This call will provide an overview of FEMA’s Risk MAP program and the Discovery process, and will allow us to review with you our request for the exchange of coastal flood risk and hazard mitigation data, and to learn more about your community’s coastal flood hazard risks and needs, in advance of the Discovery Meeting. The partnership and exchange of data between FEMA, the State, and your community is vital to the success of identifying flood risks and needs that may impact your citizens.

The Information Exchange conference call is scheduled to occur:

Date/Time: Thursday, July 26, 2012; 10:00 - 11:00 am ET
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php
Meeting Number: 445288484
Call in number: 1-866-398-2885
Participant Code: 197462

If you or another community representative is unable to attend the Information Exchange conference call, we ask that you fill out and return the enclosed data request form by August 3, 2012. This is the same data request form that will be discussed during the conference call. The completed form can be sent to:

Via e-mail: GreatLakesFloodStudy@starr-team.com
By mail: Scott Banjavcic
CDM Smith/STARR
125 S. Wacker Drive, Suite 600
Chicago, Illinois 60606

We look forward to working with you to reduce the risks associated with coastal flooding and increase your community’s resiliency for the long term. To learn more about Discovery, please visit http://www.fema.gov/library and search keywords “Discovery brochure” or contact Ken Hinterlong, FEMA Region V Senior Engineer, at (312) 408-5529, or by email at ken.hinterlong@fema.dhs.gov. We look forward to discussing this with you during the Information Exchange call and/or seeing you at the upcoming Discovery Meeting.

Sincerely,

Christine Stack

Re: Invitation to Attend Community Meetings Regarding Lake Michigan Coastal Flood Risk

Dear Mr. Wolf:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. Please see enclosed Risk MAP Flood Risk Products Fact Sheet. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

Your Discovery Meeting is scheduled to occur:

Date/Time: Tuesday, August 14, 2012; 2:00 - 4:00 pm ET
Location: Bay de Noc Community College, Rooms 958 & 962
Address: 2001 North Lincoln Road
Escanaba, Michigan 49829

Please save this date on your calendar. At the meeting, we will review the coastal flood risk data we have gathered to date and discuss your community’s coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Please RSVP to FEMA’s study contractor (STARR) Scott Banjavcic at (312) 780-7755 or email to GreatLakesFloodStudy@starr-team.com no later than August 3, 2012. Please reference the Discovery Meeting date and time in your RSVP.

Re: Invitation to Attend Community Meetings Regarding Lake Michigan Coastal Flood Risk

Dear Ms. Bradshaw:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. Please see enclosed Risk MAP Flood Risk Products Fact Sheet. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

Your Discovery Meeting is scheduled to occur:

Date/Time: Tuesday, August 14, 2012; 2:00 - 4:00 pm ET
Location: Bay de Noc Community College, Rooms 958 & 962
Address: 2001 North Lincoln Road
Escanaba, Michigan 49829

Please save this date on your calendar. At the meeting, we will review the coastal flood risk data we have gathered to date and discuss your community’s coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Please RSVP to FEMA’s study contractor (STARR) Scott Banjavcic at (312) 780-7755 or email to GreatLakesFloodStudy@starr-team.com no later than August 3, 2012. Please reference the Discovery Meeting date and time in your RSVP.
So that we can better prepare for the upcoming Discovery Meeting, we are asking local communities to participate in an Information Exchange conference call and WebEx. This call will provide an overview of FEMA’s Risk MAP program and the Discovery process, and will allow us to review with you our request for the exchange of coastal flood risk and hazard mitigation data, and to learn more about your community’s coastal flood hazard risks and needs, in advance of the Discovery Meeting. The partnership and exchange of data between FEMA, the State, and your community is vital to the success of identifying flood risks and needs that may impact your citizens.

The Information Exchange conference call is scheduled to occur:

Date/Time: Thursday, July 26, 2012; 10:00 - 11:00 am ET
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php
Meeting Number: 445288484
Call in number: 1-866-398-2885
Participant Code: 197462

If you or another community representative is unable to attend the Information Exchange conference call, we ask that you fill out and return the enclosed data request form by August 3, 2012. This is the same data request form that will be discussed during the conference call. The completed form can be sent to:

Re: Invitation to Attend Community Meetings Regarding Lake Michigan Coastal Flood Risk

Dear Mr. Hill:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. Please see enclosed Risk MAP Flood Risk Products Fact Sheet. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

Your Discovery Meeting is scheduled to occur:

- **Date/Time:** Monday, August 13, 2012; 1:00 - 3:00 pm ET
- **Location:** Saint Ignace Public Library
- **Address:** 110 West Spruce Street
  - Saint Ignace, Michigan 49781

Please save this date on your calendar. At the meeting, we will review the coastal flood risk data we have gathered to date and discuss your community’s coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Please RSVP to FEMA’s study contractor (STARR) Scott...
So that we can better prepare for the upcoming Discovery Meeting, we are asking local communities to participate in an Information Exchange conference call and WebEx. This call will provide an overview of FEMA’s Risk MAP program and the Discovery process, and will allow us to review with you our request for the exchange of coastal flood risk and hazard mitigation data, and to learn more about your community’s coastal flood hazard risks and needs, in advance of the Discovery Meeting. The partnership and exchange of data between FEMA, the State, and your community is vital to the success of identifying flood risks and needs that may impact your citizens.

The Information Exchange conference call is scheduled to occur:

Date/Time: Wednesday, July 25, 2012; 10:00 - 11:00 am ET
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php
Meeting Number: 445288484
Call in number: 1-866-398-2885
Participant Code: 197462

If you or another community representative is unable to attend the Information Exchange conference call, we ask that you fill out and return the enclosed data request form by August 3, 2012. This is the same data request form that will be discussed during the conference call. The completed form can be sent to:

**Via e-mail:**
GreatLakesFloodStudy@starr-team.com

**By mail:**
Scott Banjavcic

For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

Your Discovery Meeting is scheduled to occur:

Date/Time: Monday, August 13, 2012; 1:00 - 3:00 pm ET
Location: Saint Ignace Public Library
Address: 110 West Spruce Street
          Saint Ignace, Michigan 49781

Please save this date on your calendar. At the meeting, we will review the coastal flood risk data we have gathered to date and discuss your community’s coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Please RSVP to FEMA’s study contractor (STARR) Scott.
Mr. Patrick Durm

Page 2

Banjavcic at (312) 780-7755 or email to GreatLakesFloodStudy@starr-team.com no later than August 3, 2012. Please reference the Discovery Meeting date and time in your RSVP.

So that we can better prepare for the upcoming Discovery Meeting, we are asking local communities to participate in an Information Exchange conference call and WebEx. This call will provide an overview of FEMA’s Risk MAP program and the Discovery process, and will allow us to review with you our request for the exchange of coastal flood risk and hazard mitigation data, and to learn more about your community’s coastal flood hazard risks and needs, in advance of the Discovery Meeting. The partnership and exchange of data between FEMA, the State, and your community is vital to the success of identifying flood risks and needs that may impact your citizens.

The Information Exchange conference call is scheduled to occur:

Date/Time: Wednesday, July 25, 2012; 10:00 - 11:00 am ET  
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php  
Meeting Number: 445288484  
Call in number: 1-866-398-2885  
Participant Code: 197462

If you or another community representative is unable to attend the Information Exchange conference call, we ask that you fill out and return the enclosed data request form by August 3, 2012. This is the same data request form that will be discussed during the conference call. The completed form can be sent to:

Via e-mail: GreatLakesFloodStudy@starr-team.com  
By mail: Scott Banjavcic  
CDM Smith/STARR  
125 S. Wacker Drive, Suite 600  
Chicago, Illinois 60606

We look forward to working with you to reduce the risks associated with coastal flooding and increase your community’s resiliency for the long term. To learn more about Discovery, please visit http://www.fema.gov/library and search keywords “Discovery brochure” or contact Ken Hinterlong, FEMA Region V Senior Engineer, at (312) 408-5529, or by email at ken.hinterlong@fema.dhs.gov. We look forward to discussing this with you during the Information Exchange call and/or seeing you at the upcoming Discovery Meeting.

Re: Invitation to Attend Community Meetings Regarding Lake Michigan Coastal Flood Risk

Dear Mr. Brotherton:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. Please see enclosed Risk MAP Flood Risk Products Fact Sheet. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Please RSVP to FEMA’s study contractor (STARR) Scott Banjavcic at (312) 780-7755 or email to GreatLakesFloodStudy@starr-team.com no later than August 3, 2012. Please reference the Discovery Meeting date and time in your RSVP.
So that we can better prepare for the upcoming Discovery Meeting, we are asking local communities to participate in an Information Exchange conference call and WebEx. This call will provide an overview of FEMA’s Risk MAP program and the Discovery process, and will allow us to review with you our request for the exchange of coastal flood risk and hazard mitigation data, and to learn more about your community’s coastal flood hazard risks and needs, in advance of the Discovery Meeting. The partnership and exchange of data between FEMA, the State, and your community is vital to the success of identifying flood risks and needs that may impact your citizens.

The Information Exchange conference call is scheduled to occur:

Date/Time: Thursday, July 26, 2012; 10:00 - 11:00 am ET
Link to WebEx: http://e-meetings.verizonbusiness.com/nc/join.php
Meeting Number: 445288484
Call in number: 1-866-398-2885
Participant Code: 197462

If you or another community representative is unable to attend the Information Exchange conference call, we ask that you fill out and return the enclosed data request form by August 3, 2012. This is the same data request form that will be discussed during the conference call. The completed form can be sent to:

Via e-mail: GreatLakesFloodStudy@starr-team.com
By mail: Scott Banjavcic
CDM Smith/STARR
125 S. Wacker Drive, Suite 600
Chicago, Illinois 60606

We look forward to working with you to reduce the risks associated with coastal flooding and increase your community’s resiliency for the long term. To learn more about Discovery, please visit http://www.fema.gov/library and search keywords “Discovery brochure” or contact Ken Hinterlong, FEMA Region V Senior Engineer, at (312) 408-5529, or by email at ken.hinterlong@fema.dhs.gov. We look forward to discussing this with you during the Information Exchange call and/or seeing you at the upcoming Discovery Meeting.

Sincerely,

Christine Stack

Post Office Box 515
Manistique, Michigan 49854

Re: Invitation to Attend Community Meetings Regarding Lake Michigan Coastal Flood Risk

Dear Mayor Peterson:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. Please see enclosed Risk MAP Flood Risk Products Fact Sheet. More information about the Great Lakes Coastal Flood Study may be found at http://www.greatlakescoast.org.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://www.fema.gov/plan/prevent/fhm/rm_main.shtm.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by communities will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

Your Discovery Meeting is scheduled to occur:

Date/Time: Tuesday, August 14, 2012; 2:00 - 4:00 pm ET
Location: Bay de Noc Community College, Rooms 958 & 962
Address: 2001 North Lincoln Road
Escanaba, Michigan 49829

Please save this date on your calendar. At the meeting, we will review the coastal flood risk data we have gathered to date and discuss your community’s coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify your community’s coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, Hazard Mitigation planning, and grant programs available to eligible communities. To best facilitate this discussion, we would like to request your help in inviting community leaders, emergency managers, GIS specialists, engineers, outreach specialists, and local planners to the meeting. Dear State of Michigan Lake Michigan Coastal Flood Study Stakeholders:

The Federal Emergency Management Agency (FEMA) is conducting a comprehensive study of flood hazards for Lake Michigan and the rest of the United States Great Lakes through FEMA’s Risk Mapping, Assessment, and Planning (MAP) Program. Data from this study will eventually be used to convey coastal flood hazard risk through revised Flood Insurance Rate Maps (FIRMs), also known as regulatory products, and new risk planning and assessment products and datasets, also referred to as non-regulatory products and datasets. More information about the Great Lakes Coastal Flood Study may be found at http://cts.vresp.com/c/?OPP/1877897f4f/TEST/d963a8f31e.

The goal of Risk MAP is to support actions that make communities safer from flooding. The Risk MAP program wants to achieve continued improvement of flood hazard information for the National Flood Insurance Program (NFIP); to promote increased awareness and understanding of flood risk; to increase community engagement; and to identify and support actions that local stakeholders can take to reduce natural hazard risks. For additional information on the Risk MAP Program, please visit http://cts.vresp.com/c/?OPP/1877897f4f/TEST/c2cd6b8fb3.

The first phase of the Risk MAP process is Discovery. Through Discovery, input provided by local stakeholders will help FEMA to better understand local coastal flood risk data and needs, and characterize local conditions that contribute to coastal flood risk.

We would like to invite you to attend one of the following Discovery Meetings being held in Michigan for Lake Michigan. Although each Discovery Meeting will give the same overall message, each meeting will be catered to the coastal communities within the counties listed below:

Vanburen County and Berrien County (Discovery Meeting) Monday, September 10, 2012 2:00 - 4:00 pm Berrien County Administrative Building
701 Main Street
St. Joseph, MI 49085

Ottawa County and Allegan County (Discovery Meeting) Tuesday, September 11, 2012 9:00 - 11:00 am Ottawa County Fillmore Street Complex Board Room 12220 Fillmore Street, Room 310 West Olive, MI 49460
Oceana County and Muskegon County (Discovery Meeting) Wednesday, September 12, 2012 9:00 - 11:00 am Louis A. McMurray Conference and Transportation Center
2624 Sixth Street
Muskegon Heights, MI 49444

Manistee County and Mason County (Discovery Meeting) Wednesday, September 12, 2012 3:00 - 5:00 pm Community Room 400 S. Harrison Street Ludington, MI 49431

Grand Traverse County, Benzie County and Leelanau County (Discovery Meeting)
Thursday, September 13, 2012
1:00 - 3:00 pm
Training Room
400 Boardman Avenue
Traverse City, MI 49684

Antrim County, Charlevoix County and Emmet County (Discovery Meeting) Friday, September 14, 2012 9:00 - 11:00 am
Bellaire Community Hall
202 North Bridge Street
Bellaire, MI

Mackinac County (Discovery Meeting)
Monday, August 13, 2012
1:00 - 3:00 pm
St. Ignace Public Library
110 W. Spruce Street,
St. Ignace, MI 49781

Delta County, Schoolcraft County and Menominee County (Discovery Meeting)
Tuesday, August 14, 2012
2:00 - 4:00 pm
Bay de Noc Community College, Rooms 958 & 962
2001 N. Lincoln Road
Escanaba, MI 49829

Please save this date on your calendar. At the meetings, we will review the coastal flood risk data we have gathered to date and discuss local coastal floodplains, mitigation plan and projects, coastal flood risk concerns, and coastal floodplain management activities. This discussion will allow us to better identify local coastal flood hazard needs and subsequent Risk MAP regulatory and non-regulatory products and datasets that can be delivered during the Risk MAP project. We will also discuss how the coastal flood risks and needs are related to mapping, risk assessment, hazard mitigation planning, and grant programs available to eligible communities.

Please RSVP to FEMA’s study contractor (STARR) Holly Davis at (904) 363-8451 or email to GreatLakesFloodStudy@starr-team.com no later than one week prior to the meeting you are attending. Please reference the Discovery Meeting date and time in your RSVP.

A Community Coastal Data Request Form was recently mailed to local community officials, along with the Discovery Meeting invitation.
This form is also available online at:
http://cts.vresp.com/c/?OPP/1877897f4f/TEST/f62289beff
If you have data or information that you would like to provide to FEMA or discuss with us in advance of the Discovery Meetings, please also contact Holly Davis of STARR at (904) 363-8451 or by email at GreatLakesFloodStudy@starr-team.com.

We look forward to working with you to reduce the risks associated with coastal flooding and increase resiliency for the long term. To learn more about Discovery, please visit http://cts.vresp.com/c/?OPP/1877897f4f/TEST/a06a5a30cc and search keywords "Discovery brochure" or contact Ken Hinterlong, FEMA Region V Senior Engineer, at (312) 408-5529, or by email at ken.hinterlong@fema.dhs.gov. We look forward to seeing you at the upcoming Discovery Meeting.

MACKINAC COUNTY DISCOVERY MEETING DOCUMENTS

Discovery Meeting Agenda
Discovery Meeting Sign-In Sheets
Discovery Meeting Minutes
Discovery Meeting Presentation
Discovery Meeting Agenda

1. **Why are we here? (1:00 – 1:15 PM ET)**
   - Great Lakes Coastal Flood Study Overview and Schedule
   - Discovery Process and Outcomes

2. **Coastal mapping and flood risk topics to be aware of (1:15 – 1:40 PM ET)**

3. **How does this apply to my community? (1:40 – 1:50 PM ET)**

4. **Interactive Session A (1:50 – 2:15 PM ET)**
   - View and Discuss Local Coastal Areas of Concern Using the Discovery Map and Community Risk MAP Questionnaire

5. **Hazard mitigation opportunities and grant funding (2:15 – 2:25 PM ET)**

6. **Interactive Session B (2:25 – 2:50 PM ET)**
   - Discuss Mitigation Action Opportunities
   - Introduce the Mitigation Action Form and Mitigation Action Tracker

7. **Wrap Up (2:50 – 3:00 PM ET)**
   - Review of action items and next steps

*Optional Interactive Stations (30 minutes - 1hr following meeting)*

- **Draft Transect Map Station:** Talk to technical staff about draft transects and view draft transects in GIS
- **Mitigation Resources, Strategies, and Actions Station:** Talk with FEMA and State staff about areas of concern and potential mitigation actions to help reduce risk. Fill out Mitigation Action Form.

Meeting schedule: Monday, August 13, 2012 pm 1:00 – 3:00 pm (ET)
Meeting Location: St. Ignace Public Library; St. Ignace, MI
Discovery Area: Coastal communities in Mackinac County, MI
Attendees: 10 people attended the Lake Michigan Discovery Meeting. Please see attached sign-in sheet for a complete list of attendees

FACILITATORS

FEMA
Lee Traeger

STARR Contractor
Jaspreet Randhawa
Scott Banjavcic
Troy Thielen

MEETING AGENDA:

1. Why are we here? (15 minutes)
   • Great Lakes Coastal Flood Study Overview and Schedule
   • Discovery Process and Outcomes

2. Coastal mapping and flood risk topics to be aware of (25 minutes)

3. How does this apply to my community? (10 minutes)

4. Interactive Session A (25 minutes)
   • View and Discuss Local Coastal Areas of Concern Using the Discovery Map and Community Risk MAP Questionnaire

5. Hazard mitigation opportunities and grant funding (10 minutes)

6. Interactive Session B (25 minutes)
   • Discuss Mitigation Action Opportunities
   • Introduce the Mitigation Action Form and Mitigation Action Tracker

7. Wrap Up (10 minutes)
   • Review of action items and next steps

Optional Interactive Stations (30 minutes - 1hr following meeting)

• Draft Transect Map Station: Talk to technical staff about draft transects and view draft transects in GIS
• Mitigation Resources, Strategies, and Actions Station: Talk with FEMA and State staff about areas of concern and potential mitigation actions to help reduce risk. Fill out Mitigation Action Form.

INTERACTIVE DISCUSSION:

• Nathan Fazer from Eastern Upper Peninsula Regional Planning and Development mentioned that Mackinac County is starting to update their hazard mitigation plan.
Nathan Fazer from Eastern Upper Peninsula Regional Planning and Development mentioned that Mackinac County will be developing GIS parcels to be completed by July 2013.

Mike Kasper, Coordinator Mackinac County Emergency Management, identified two hazard areas for the county. Ice build-up at the mouth of Black and Pine Rivers during winter snow melts causes a jam at the mouth of the river where it meets Lake Michigan. The river then backs up and can cause serious flooding and well contamination issues. Mitigation action that was identified is to elevate well heads.

Mike Kasper, Coordinator Mackinac County Emergency Management, also mentioned that depending on lake levels there are some potential flooding issues near St. Ignace.

Clark, Marquette, and St. Ignace townships need to be eliminated from Lake Michigan Discovery area because they are located in Lake Huron.

James Fenlon from the Mackinac County Equalization Department has new high resolution 12” aerials that can be provided to FEMA Study team upon request.

Al Garavaglia, Hudson Township, asked about the possibility of sand build-up at the mouth of the Black River causing the ice build-up and flooding.

FEATURES NOTED ON MAPS:

- Important electrical substations and natural gas pipelines are located between transects 702 and 703 near Mackinac Bridge in St. Ignace.
- Past flooding issues have occurred in the Brevort area between transects 691 and 697 when lake levels were higher.
- Check transect 690, Pointe Aux Chenes, for placement on important structure and in low spot.
- Labeled Mouth of Black River in reference to ice build-up related flooding, Transects 667 and 668.
- Lower more populated areas of the county are located near Naubinway, Transects 662-664.
- Largely, un-populated State wilderness is located between transects 644 and 657, west of Naubinway to county boundary with Schoolcraft County. Number of transects can be reduced in these areas.
- High banks with potential for erosion are located between Transects 680-683 i.e. Brevort area along Highway 2.

MITIGATION ACTIONS:

- Raise well head elevations to prevent contamination due to flooding along Black River.
- Commitment by Eastern Upper Michigan Regional Planning Commission to update Hazard Mitigation Plan.
- Need for bank erosion protection in Brevort area along Highway 2.
Introductions

Who’s here?

- State Representatives
  - MDEQ
  - SHMO

- Risk MAP Project Team
  - FEMA
  - STARR

- Local Stakeholders
  - CEOs
  - Floodplain Administrators
  - Planners
  - Engineers
  - Emergency Managers
  - Community Leaders
  - Regional Planning Agencies
  - Coastal Organizations
Effective Map Status

- Bois Blanc Twp - No map
- Clark Twp - Yes 11/4/92
- Garfield Twp - Yes 11/20/00
- Hendricks Twp - 11/4/92
- Hudson Twp - 11/4/92
- Mackinac Island - No map
- Marquette Twp - No map
- Moran Twp - yes 11/20/00
- Portage Twp - no map
- St. Ignace Twp - yes 11/20/00
- City of St Ignace - no map
Discovery Meeting Agenda

- Why are we here?
  - Risk MAP Program, Great Lakes Study, and Discovery

- Coastal mapping and flood risk topics

- How does this apply to my community?
  - NFIP compliance, local impacts of coastal study, hazard mitigation, and grant funding

- Interactive Sessions
  - View and Discuss Local Coastal Areas of Concern Using the Discovery Map and Community Risk MAP Questionnaire
  - Discuss Mitigation Action Opportunities and Introduce the Mitigation Action Form

- Wrap Up

- Optional Interactive Stations
Through collaboration with State, Local, and Tribal entities, Risk MAP aims to deliver quality data that increases public awareness and leads to action that reduces risk to life and property.
Great Lakes Coastal Flood Study
Overview

- Latest models, data, and technology
- Deliver updated flood maps and flood risk datasets
- Equip Federal Agencies, eight States and hundreds of coastal communities with data and planning tools to facilitate flood risk actions to enhance resiliency along the Great Lakes

Partners Involved:
- FEMA
- USACE
- Engineering Research Development Center (ERDC)
- ASFPM
- States
- FEMA Contractors
34 counties in total
- 4 counties in UP Michigan
- 11 counties in Wisconsin
- 2 counties in Illinois
- 3 counties in Indiana
- 14 counties in lower Michigan

226 coastal communities
Lake Michigan coastal communities in Mackinac County:

Do we have all coastal communities identified?
Mackinac County
Clark
Garfield
Hendricks
Hudson
Mackinac Island
Marquette
Moran
Newton
St. Ignace (Township and City)
Discovery Meeting Objectives

- Continue and expand upon stakeholder engagement
- Discuss data inputs from Federal, state and local
- Identify local coastal flood hazard needs and areas of concern
- Identify products and datasets that best advance coastal mitigation action
- NFIP regulatory updates
- Discovery schedule and deliverables
Discovery Schedule Overview

- Storm Surge Study Data Collection and Stakeholder Coordination
- Storm Surge Study
- Stakeholder Coordination
- Data collection and Analysis
- Discovery Meeting and follow up
- Scope Refinement

Added Efforts for Long-Term Coastal Studies

Standard Discovery Efforts

RiskMAP
Increasing Resilience Together

Great Lakes Coastal Flood Study
greatlakescoast.org

Lake Michigan Discovery Report Appendix C - Mackinaw County
Schedule of Activities

- Identify Draft Transect Locations – Completed
- Research available data – Completed
- Information Exchange with Community Stakeholders – July 2012
- Prepare draft Discovery Maps and Reports – August 2012
- Establish inventory of coastal structures based on oblique imagery – October 2012
- Facilitate Discovery Meetings – August/September 2012
- Final Discovery Report and Maps – November 2012
- Create library of digital data – November 2012
Great Lakes Coastal Flood Study
Discovery Products

- **Final Discovery Report**
  - Single, comprehensive report for all of Lake Michigan, with appendices for each Discovery meeting
  - Includes pre-discovery data, meeting agenda, sign-in sheets, discussion topics, decisions made, etc.

- **Final Discovery Maps**
  - Including feedback from participants
  - Visual representation of meeting outcomes
  - Delivered in digital format
Discovery Outcomes

- Explain the Project
  - Regulatory and non-regulatory products/datasets
  - Analysis, concepts, timelines

- Encourage Community Participation
  - Transect Locations
  - Areas of concern and need
  - Data to improve upon products and datasets

- Introduce Mitigation Action
  - Mitigation Action Form
  - Action Tracker
  - Mitigation strategies for coastal flood and erosion
Data Collection in progress

- New high quality USACE Topographic – Light Detection and Ranging (LiDAR) and Bathymetry Data
- Base data – boundaries, streams, census blocks, etc.
- Average Annualized Loss data
- Shoreline classification Dataset
- Dams
- Federal and State disaster information
- Repetitive loss data
- Hazard Mitigation plans
- Hazard Mitigation Grants Program (HMGP) projects
- Stream, wave, and water level gage locations
- Pre-Disaster Mitigation Program projects
- Draft Transects
Data Gaps

- Building footprints
- Critically eroded beach areas
- Coastal construction control line
- Critical Facilities (in GIS format)
- High water marks
- Areas of recent or planned development
- Areas of high growth
- Recent land changes due to development, erosion, etc.
- Known flooding issues not represented on effective FIRMs or listed in CNMS
Coastal Mapping and Flood Risk Topics

- Draft Transects
- Coastal Guidance Updates
- VE Zone Mapping and LiMWA
- Coastal Flood Risk Products
Basic Elements of a Coastal Hazard Analysis

Base Flood Elevation on FIRM includes 4 components:

1. Storm surge stillwater elevation (SWEL) – determined from storm surge model
2. Amount of wave setup
3. Wave height above storm surge (stillwater) elevation
4. Wave runup above storm surge elevation (where present)
Riverine XS vs Coastal Transect
Transect Placement

- Transects are placed to define representative profiles for a shoreline reach

- Transect spacing depends on upland development
  - Developed areas – As dense as 1,000 ft
  - Rural areas – Spacing can be 1-2 miles

- Transects are:
  - Profiles along which flooding analysis is performed
  - Used to transform offshore conditions to shoreline
  - Use to define coastal flood risks inland of shoreline
- 72 transects
- 92 miles of shoreline along Lake Michigan
Draft Transect Layout
Mackinac County

- 72 transects
- 92 miles of shoreline along Lake Michigan
Coastal Flood Hazard Zones

- **Hazard Zones**
  - **Zone VE** – Areas expected to be affected by high velocity wave impact in 100-year event (wave heights or runup depth at or greater than 3 feet)
    - Base Flood Elevation established
  - **Zone AE** – Areas expected to be flooded by inundation in 100-year event
    - Base Flood Elevation established (wave heights and runup depth less than 3 feet)
  - **Zone X** – Areas not expected to be flooded in 100-year event
    - Shaded X – Areas expected to be flooded in 500-year event
    - Base Flood Elevations not established
  - **LiMWA** – Areas subject to wave heights of at least 1.5 feet
    - Non-Regulatory

- **Gutters**
  - Internal zone breaks where Base Flood Elevation changes
  - VE/AE Gutter - Location where risk of damage due to wave action diminishes
VE Zones in the Great Lakes

From the revised Appendix D.3:

- “VE zones may also be mapped where the engineering analysis indicates their presence“
- “The typical study finding is a narrow VE zone, making its usefulness uncertain on maps at usual scales“
- “Relatively small numbers of existing coastal buildings are likely to be affected by possible VE zone designations along some Great Lakes”
- “Only with prior approval from the FEMA study representative should the VE zones be mapped”
How is LiMWA Defined?

- LiMWA is the line mapped to delineate the inland extent of wave heights of at least 1.5 feet
  - Wave heights as small as 1.5 feet can cause significant damage to structures
- LiMWA alerts people that are not in the high wave hazard zone (Zone VE) that they may still be affected by wave action in the Zone
- CRS benefit for communities requiring Zone VE construction standards in areas defined by LiMWA or areas subject to waves greater than 1.5 ft
Wave Action - Structural Risk

- **US Army Corps of Engineers – 1973**
  - Breaking wave height of 3 feet
  - “area subject to high velocity waters, including but not limited to hurricane wave wash”

- **FEMA – 2000**
  - Coastal Construction Manual
  - Additional post-storm damage assessments identified 1.5 wave also can knock a structure off a foundation

Limit of Moderate Wave Action (LiMWA)

FEMA Procedure Memorandum No. 50, 2008

- Not a regulatory requirement
- No Federal Insurance requirements tied to LiMWA
Coastal Flood Risk Products

- Coastal Depth Grids and HAZUS
- Changes Since Last FIRM
- Coastal Non-Regulatory Products
Standard Flood Risk Products

- Coastal Depth Grids
- Flood Risk Assessment (HAZUS)
Coastal Depth Grid

- Should reflect total depth (i.e. stillwater and waves) – typically only produced for the 1% annual chance flood
- Created using the regulatory mapping and associated zone breaks as input
Coastal Flood Risk Assessments

- Similar to Flood Risk Assessments for riverine, but using the coastal depth grids as input for the refined analysis
- Hazus analysis and data can support adoption of higher regulatory standards for structures in high loss areas
- Provides justification to fund mitigation actions
### Changes Since Last FIRM

- Contains primary and secondary Land Use tables – same for coast type and vegetation
- Current project collects data at one-mile spacing, for scoping and cost
- Current project does not include field-based reconnaissance or sediment/subsurface soils collection
Coastal FRM

- Similar to riverine map
- Highlights area where datasets were produced
- Use of callout boxes
- Should drive the conversation towards mitigation
Coastal Updates to Flood Risk Report

- Explanations of coastal non-regulatory datasets and their use in risk communication and mitigation planning
- References to other publications and resources that provide information on coastal risks
- Captures and reports increases and decreases in Coastal High Hazard Areas (VE & V Zones) within the Changes Since Last FIRM tables in the FRR

Non-Regulatory Product Usage and Action

- Risk MAP Products and Datasets help communities make good decisions to reduce flood risk:
  - Hazard Mitigation Planning
  - Floodplain Management and Community Rating System
  - Community Comprehensive or General Planning
  - Community Investment - Capital Improvement Planning
  - Public Outreach
  - Hazard Mitigation Assistance Grant Application Prioritization and Support
  - Other Non-FEMA Grants to Reduce Flood Risk
  - Response and Recovery Planning

- Mitigation Action Form
How does this apply to my community?

- NFIP Compliance
- Local impacts of coastal study
National Flood Insurance Program

- Allows property owners to purchase flood insurance at reduced rates
- Community responsibilities
  - adopt and enforce compliant regulations
- FOCUS is in building the local floodplain management capability
V Zones for Lake Michigan?

- Lake Michigan communities currently do not have V/VE Zones. Majority of the communities have coastal A/AE zones.

- If coastal AE and VE Zones are added on maps where they did not exist before, all affected communities must update regulations to include coastal requirements.
  - State will provide regulations assistance and technical support if/when coastal flood zones are added.
Coastal Zones and NFIP Compliance

- Must meet minimum NFIP and community coastal requirements
- NFIP design and construction requirements are more stringent in V zones due to wave, debris, and erosion hazards in V zones
- Recommendations for exceeding the minimum NFIP requirements (Coastal A Zones)
  - Can obtain CRS credits for Coastal A Zone Requirements
- Resources Available
Community Rating System (CRS)

- Flood insurance premium rates discounted to reward community actions that reduce flood losses, facilitate accurate insurance ratings, and promote the awareness of flood insurance
- Class rating system from 1 to 10
- 18 creditable activities organized under four categories:
  - Public Information
  - Mapping and Regulations
  - Flood Damage Reduction
  - Flood Preparation
- http://training.fema.gov/EMIWeb/CRS/
Interactive Session A

- View and Discuss Local Coastal Areas of Concern Using the Discovery Map

greatlakescoast.org
Action Tracker

- New mitigation tool
- Houses community-identified mitigation actions
- Actions can be edited by community officials
- A tool for communities to support future mitigation planning efforts

We will input your community’s action into the Action Tracker and send you a report and a link - http://fema.starr-team.com
Next Steps

- **Communities:**
  - Provide data and Mitigation Action Forms to STARR with a target date of September 14, 2012

- **STARR/FEMA will:**
  - Assess data and information provided
  - Email summary of today’s Discovery Meeting to you within one month
  - Prepare final Discovery Maps and Discovery Report
  - Follow-up regarding Risk MAP Project

Lake Michigan Discovery Report Appendix C - Mackinac County
Questions?
Optional Interactive Stations

- **Draft Transect Map Station**
  - View draft transect locations and oblique imagery in data viewer
  - Discuss draft transect locations with technical staff

- **Mitigation Resources, Strategies, and Actions Station**
  - Talk with FEMA and State representatives about areas of concern and potential mitigation actions to help reduce risk
  - Fill out Mitigation Action Form

### COMMUNITY PLANS AND PROJECTS

- Does your community have a comprehensive plan? If so, was your hazard mitigation plan coordinated with the comprehensive plan?
- Does your community have a comprehensive plan with a special consideration for coastal areas?
- Does your community have a coastal zone management plan?
- Does your community have planning staff or a planning/zoning commission and other programs contributing to the effective administration of floodplain zoning, building codes, open space preservation, and coastal zone management? If so, explain the roles in floodplain management and provide examples of programs in place.
- Does your community have areas of recent or planned development or areas of high growth or other natural land changes (e.g., wildfires or landslides)?
- Are there any locations of other ongoing studies or projects and study areas that have been modified since the last update?

### GIS DATA

- Would like to know of any areas in Hudson that may fall in the floodplain. Want to protect our citizens from any issues we should be aware of.
